中国工程科学 (Japan), 1900 *Structural Prognostics and Health Management in Power & Energy Systems* Dong Wang, Shun-Peng Zhu, Xiancheng Zhang, Gang Chen, José A.F.O. Correia, Guian Qian, 2019-11-21 The idea of preparing an Energies Special Issue on Structural Prognostics and Health Management in Power Energy Systems is to compile information on the recent advances in structural prognostics and health management SPHM Continued improvements on SPHM have been made possible through advanced signature analysis performance degradation assessment as well as accurate modeling of failure mechanisms by introducing advanced mathematical approaches tools Through combining deterministic and probabilistic modeling techniques research on SPHM can provide assurance for new structures at a design stage and ensure construction integrity at a fabrication phase Specifically power and energy system failures occur under multiple sources of uncertainty variability resulting from load variations in usage material properties geometry variations within tolerances and other uncontrolled variations Thus advanced methods and applications for theoretical numerical and experimental contributions that address these issues on SPHM are desired and expected which attempt to prevent overdesign and unnecessary inspection and provide tools to enable a balance between safety and economy to be achieved This Special Issue has attracted submissions from China USA Portugal and Italy A total of 26 submissions were received and 11 articles finally published American Book Publishing Record, 2005 *Advances in Engineering Materials, Structures and Systems: Innovations, Mechanics and Applications* Alphose Zingoni, 2019-08-21 Advances in Engineering Materials Structures and Systems Innovations Mechanics and Applications comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town South Africa from 2 to 4 September 2019 The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures The many topics featured in these Proceedings can be classified into six broad categories that deal with i the mechanics of materials and fluids elasticity plasticity flow through porous media fluid dynamics fracture fatigue damage delamination corrosion bond creep shrinkage etc ii the mechanics of structures and systems structural dynamics vibration seismic response soil structure interaction fluid structure interaction response to blast and impact response to fire structural stability buckling collapse behaviour iii the numerical modelling and experimental testing of materials and structures numerical methods simulation techniques multi scale modelling computational modelling laboratory testing field testing experimental measurements iv innovations and special structures nanostructures adaptive structures smart structures composite structures bio inspired structures shell structures membranes space structures lightweight structures long span structures tall buildings wind turbines etc v design in traditional engineering materials steel concrete steel concrete composite
