Innovations in Information Systems Modeling: Methods and Best Practices Halpin, Terry,Krogstie, John,Proper, Erik,2009-03-31 Covers central topics in information systems modeling and architectures Includes the latest developments in information systems modeling methods and best practices

Successful Software Reengineering Valenti, Salvatore,2001-07-01 Software process reengineering has become highly visible over the past several years Efforts are being undertaken by organizations of all types and sizes as they attempt to deal with the challenges of quality complexity and competitiveness As an emerging technology the effectiveness and potential impact of process improvement efforts have been debated but not fully tested or validated At the very core of this technological evolution is the idea that the quality of a software product is highly dependent on the quality of the process used for its development Successful Software Reengineering examines the most recent theories models approaches and processes involved with the concept of software improvement and reengineering

Fundamental Approaches to Software Engineering Ralf-Detlef Kutsche,Herbert Weber,2003-08-01 ETAPS 2002 was the fth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998by combining a number of existing and new conferences This year it comprised 5 conferences FOSSACS FASE ESOP CC TACAS 13 satellite workshops ACL2 AGT CMCS COCV DCC INT LDTA SC SFEDL SLAP SPIN TPTS and VISS 8invited lectures not including those speci c to the satellite

events and several tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Systems Architecting Gerrit Muller, 2011-09-08 Derived from industry training classes that the author teaches at the Embedded Systems Institute at Eindhoven the Netherlands and at Buskerud University College at Kongsberg in Norway Systems Architecting A Business Perspective places the processes of systems architecting in a broader context by juxtaposing the relationship of the systems architect with enterprise and management This practical scenario driven guide fills an important gap providing systems architects insight into the business processes and especially into the processes to which they actively contribute The book uses a simple reference model to enable understanding of the inside of a system in relation to its context It covers the impact of tool selection and brings balance to the application of the intellectual tools versus computer aided tools Stressing the importance of a clear strategy the authors discuss methods and techniques that facilitate the architect's contribution to the strategy process They also give insight into the needs and complications of harvesting synergy insight that will help establish an effective synergy harvesting strategy The book also explores the often difficult relationship between managers and systems architects Written in an approachable style the book discusses the breadth of the human sciences and their relevance to systems architecting It highlights the relevance of human aspects to systems architects linking theory to practical experience when developing systems architecting competence

Ecosystem Services - Concept, Methods and Case Studies Karsten Grunewald, Olaf Bastian, 2015-05-18 Nature provides us with many services seemingly for free recharged groundwater fertile soil and plant biomass created by photosynthesis We human beings draw extensive benefits from these ecosystem services or ES food water supply recreation and protection from natural hazards Major international studies such as the Millennium Ecosystem Assessment have addressed the enormous role of biodiversity and ecosystems to human well being and they draw particular attention to the consequences resulting from the reduction or loss of these services These very topical issues are being addressed by authors scientists in a wide variety of disciplines and their approaches terminologies and methodological specifics are just as diverse What for example does the efficacy of nature or natural capital mean Which values of nature are particularly important how are they distributed in space and time and how can they be assessed and the relevant knowledge promoted Can all ecosystem services be quantified and even monetarised What should be done to ensure that the multiple services of nature will be available also in future This book explains the multifaceted concept of ecosystem services provides a methodological framework for its analysis and assessment and discusses case examples particularly from Germany It is addressed to scientists and practitioners in the

administrative volunteer and professional spheres especially those who deal with environment landscape management and nature conservation and regional and land use planning The target group includes experts from the business community politicians and decision makers students and all those interested in fundamental ecological economic ethical and environmental issues

considering environmental and social aspects in their decision making processes to ultimately remain competitive and prospering. However, the incorporation of sustainability into both qualitative and quantitative corporate decision making is challenging and complex. Against this background, the present doctoral dissertation reveals ways to implement and enhance corporate sustainability. This is done by means of integrating selected methods and concepts, namely the concepts of transdisciplinarity, reverse logistics and green information systems, as well as methods and tools from the discipline of operations research. Within seven research contributions, qualitative and quantitative approaches are developed that improve corporate decision making to achieve sustainability goals.

Measuring Information Systems Delivery Quality Duggan, Evan, Reichgelt, Johannes, 2006-03-31. The book provides analyses and explains some of the contradictions and apparent paradoxes of many information systems quality perspectives. Provided by publisher.

Object Oriented Computer Systems Engineering Derrick Morris, David Evans, Peter Green, Colin Theaker, 2012-12-06. This book addresses issues concerning the engineering of system products that make use of computing technology. These systems may be products in their own right, for example a computer, or they may be the computerised control systems inside larger products such as factory automation systems, transportation systems and vehicles, and personal appliances such as portable telephones. In using the term engineering, the authors have in mind a development process that operates in an integrated sequence of steps employing defined techniques that have some scientific basis. Furthermore, we expect the operation of the stages to be subject to controls and standards that result in a product fit for its intended purpose, both in the hands of its users and as a business venture. Thus, the process must take account of a wide range of requirements relating to function, cost, size, reliability, and so on. It is more difficult to define the meaning of computing technology. These days, this involves much more than computers and software. For example, many tasks that might be performed by software running in a general purpose computer can also be performed directly by the basic technology used to construct a computer, namely digital hardware. However, hardware need not always be digital; we live in an analogue world, hence analogue signals appear on the boundaries of our systems, and it can sometimes be advantageous to allow them to penetrate further.

E-Commerce and Web Technologies Kurt Bauknecht, A. Min Tjoa, 2003-08-21. This book constitutes the refereed proceedings of the 4th International Conference on E-Commerce 2003, held in Prague, Czech Republic, in September 2003. The 42 revised full papers presented together with an invited paper and a position paper were carefully reviewed and selected from 108 submissions. The papers are organized in topical sections on auctions, security, agents and search, ebXML, modeling and technology, XML design and performance, business processes and brokering, and recommender systems.
