Colour Vision Deficiencies X B. Drum, J.D. Moreland, A. Serra, 2012-12-06 Since its inception the International Research Group on Colour Vision Deficiencies IRGCVD has followed the policy that the Symposium Proceedings should be as close as possible to a complete record of the scientific content of the meeting This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies but it also has the disadvantage that papers typically span a wide range of quality In this volume however we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts In addition to being edited for English composition and grammar each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper Reviewers were instructed to include in their comments suggestions for improvement rather than recommendation or rejection In our opinion this review process recommendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the publication We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X The Editors B Drum J D Moreland A Serra eds Colour Vision Deficiencies X p xiii

Werner, 2012-12-02 This book presents an interdisciplinary overview of the main facts and theories that guide contemporary research on visual perception While the chapters cover virtually all areas of visual science from philosophical foundations to computational algorithms and from photoreceptor processes to neuronal networks no attempt has been made to provide an exhaustive treatment of these topics Rather researchers from such diverse disciplines as psychology neurophysiology

anatomy and clinical vision sciences have worked together to review some of the most important correlations between perceptual phenomena and the underlying neurophysiological processes and mechanisms The book is thus intended to serve as an advanced text for graduate students and as a guide for all vision researchers to understanding current progress outside their specialized fields of interest Examines parallel processing of visual information Discusses links between physiologically measured receptive fields and psychophysically measured perceptive fields Presents a spatial sampling by the retina and cortical modules Covers signal transduction and the sites of adaptation Describes a single cell analysis of attention Discusses computational models of vision

Colour Vision Deficiencies XII B. Drum, 2012-12-06 From the 98 presentations of the XIIth Symposium on Colour Vision Deficiencies 61 were selected after peer review and revision by the authors In addition to these contributions this volume contains a cumulative index to all authors in the IRGCVD proceedings since the first one in 1968 including the present volume The contents include contributions on basic questions of anatomical and electrophysiological organisation of the neural pathways underlying colour vision and on ways in which disturbances of these pathways can produce acquired colour vision deficiencies Further contributions deal with genetics and congenital red green colour deficiencies and colour vision testing The resulting publication contains much of interest to basic vision scientists as well as to specialists in colour vision deficiencies
