Neurosteroids and Brain Function Erminio Costa,1991
Neurosteroid Effects in the Central Nervous System Sheryl S. Smith,2003-10-27 Presenting a complete overview of the effects of steroid hormones in the brain and describing new methods for investigating these effects this book discusses theories on steroid action in the central nervous system and the techniques for receptor localization and quantification and enzyme regulation The author explores the use of transgenic antisense strategies to determine sites and the cellular effects of steroid action in the brain He covers steroid action on mood cognition sensorimotor action neuroprotection and plasticity and describes methods using molecular electrophysical and behavioral techniques to link cellular mechanisms of steroid action with behavioral effects

Neuroplasticity, Development, and Steroid Hormone Action Robert J. Handa,Shinji Hayashi,Ei Terasawa,Mitsuhiro Kawata,2001-07-30 A compilation of cutting edge research Neuroplasticity Development and Steroid Hormone Action explores the effects of steroid hormones on brain development function and aging The experimental approaches used by the authors ranges from molecular to behavioral and endocrine to neurobiological It contains scientific photographs line drawings tables color illustrations and graphs this interesting and timely text covers the neuroplastic effects of steroid hormones throughout the lifetime of various animal models such as bees fish lizards turtles birds mice rats and primates

Neurosteroids Hubert Vaudry,Kazuyoshi Tsutsui, Thirty years ago the group of Baulieu and colleagues discovered that certain steroid hormones were present in higher amounts in the brain than in the plasma and also found that suppression of circulating steroids by adrenalectomy and castration did not affect the concentration of pregnenolone dehydroepiandrosterone and their sulfate esters in the rat brain These seminal observations led to the concept that the brain in very much the same way as the adrenal cortex testis ovary and placenta was capable of synthesizing steroids These brain

born steroids called neurosteroids have been found to exert a vast array of biological activities. A number of steroidogenic enzymes have now been identified in the central nervous system by immunohistochemistry and in situ hybridization and the neuronal and hormonal mechanisms regulating the biosynthesis of neurosteroids have been partially elucidated. The aim of this Research Topic is to celebrate three decades of research on neurosteroids by gathering a bouquet of review papers and original articles from leading scientists in the flourishing field of neurosteroids.

New Perspectives in Neurosteroids
action: a Special Player Allopregnanolone Valerio Magnaghi, Giulia Puja, 2015-07-01

Early in the 80s date the first observations on the existence of hormonal steroids that may be synthesized and act in the nervous system. In order to refer to these endogenous steroids proved important to control both central and peripheral nervous system it was proposed the term neurosteroids NSs. Over the years their importance in regulating the physiological functions of neuronal and glial cells increased progressively. These steroids can be involved in several pathophysiological conditions such as depression anxiety premenstrual syndrome PMS schizophrenia and Alzheimer disease. Among the different classes of NSs the progestagens revealed particularly important. The progesterone metabolite 5 α pregnan 3 α ol 20 one also named tetrahydroprogesterone or allopregnanolone ALLO was one of the first most important steroid that was originally shown to act as neurosteroid. ALLO is synthesized through the action of the 5 α R 3 α HSD which converts P into DHP and subsequently via a bidirectional reaction into ALLO. NSs exert complex effects in the nervous system through classic genomic and non classic non genomic actions. ALLO displays a rapid non genomic effect which mainly involves the potent modulation of the GABA type A GABA A receptor function. Recently a membrane receptor has been identified as target for ALLO effects i.e. the membrane progesterone receptors mPRs that are able to activate a signalling cascade through G protein dependent mechanisms. By these ways ALLO is able to modulate several cell functions acting as neurogenic molecule on neural progenitor cells as well as by activating proliferation and differentiation of glial cells in the central and peripheral nervous system. In this topic we review the most recent acquisitions in the field of neurosteroids focusing our attention on ALLO because its effects on the physiology of neurons and glial cells of the central and peripheral nervous system are intriguing and could potentially lead to the development of new strategies for neuroprotection and or regeneration of injured nervous tissues and for the treatment of neuropsychiatric disorders.
