*New Frontiers of Knowledge Management* is a contributed volume edited by Kevin C. Desouza. The book contains a collection of 12 chapters, which cover a range of topics focusing on the new frontiers in knowledge management with creative thinking, novel insights and innovative ideas. Any attempt to edit a book on 'the new frontiers' of this multi-disciplinary and widely debated field would be a challenge. Therefore, the editor should be commended on his attempt.

The book starts with an excellent introduction by the editor, which is a must read section for any reader before embarking the rest of the chapters. It defines the term 'new frontier' in knowledge management, sets up the rationale for the book and provides a succinct summary of each author's novelty in his/her contribution to the book. The editor stresses the necessity of sharing opinions and feelings on the new frontiers and highlights his three motivations in pulling together this unique book, which aims to

1. 'provide an avenue for researchers and practitioners to be adventurous, venture out, and postulate some of their creative thinking.'
2. 'assemble authors who would cross the local space and write on knowledge management in an integrated fashion' and
3. 'seek out some of the new insights and provide an avenue for them to be presented.'

There is no doubt that the editor has achieved the above by providing an opportunity for knowledge management scholars and practitioners to share and exchange their insights and views and be explorative in seeking new ideas and innovative development.

Topics covered in the book include: science and technology knowledge management, knowledge visualization, personalizing knowledge delivery services, knowledge security in organizations, knowledge markets, software artefacts for knowledge management, ubiquitous computing in networked organizations, collaborative enterprises, knowledge flow dynamics, knowledge integration in teams, the role of incentives in knowledge transfer, and innocuous knowledge management.

The book is a mix of debates from social, organizational, technological and economic perspectives, all aiming to offer their thoughts and insights in addressing knowledge management challenges and problems, and attempting to seek new solutions. The strength of the book lies in its diversity, quality, depth and the authors' employment of multi-disciplinary perspectives in their treatments.

For example, from an organizational perspective, Chapter 5 addresses knowledge security in organizations in three focused areas: people,

van Reijssen, 2017-02-23 Knowledge management KM is about managing the lifecycle of knowledge consisting of creating storing sharing and applying knowledge Two main approaches towards KM are codification and personalization The first focuses on capturing knowledge using technology and the latter on the process of socializing for sharing and creating knowledge Social media are becoming very popular as individuals and also organizations learn how to use it The primary applications of social media in a business context are marketing and recruitment But there is also a huge potential for knowledge management in these organizations For example wikis can be used to collect organizational knowledge and social networking tools which leads to exchanging new ideas and innovation The interesting part of social media is that by using them one immediately starts to generate content that can be useful for the organization Hence they naturally combine the codification and personalisation approaches to KM This book aims to provide an overview of new and innovative applications of social media and to report challenges that need to be solved One example is the watering down of knowledge as a result of the use of organizational social media Von Krogh 2012 Leading Issues in Social Knowledge Management David

Gurteen, 2012-01-01 Perhaps one of the most surprising if not actually unsettling things about the Internet and the Web is that there is always something new on the horizon and that it is very difficult to see where this new technology will take us When ICT was just about big computers and organisational systems it was pretty obvious where the technology was moving us We all knew about Moore's Law and that we were going to have greater capacity smaller and faster devices every year And during the 1990s and the first decade of the third millennium we all became used to what the Internet and the Web had to offer But Social Software in the form of Web 2.0 is different It has put technology in the hands of people who we would never have given it a second thought a few years ago Leading Issues in Social Knowledge Management contains leading edge research which addresses some of the main issues for those of us who want to use Social Software in a Knowledge Management context or who want to study it or research it There are 10 research papers as well as an introduction from David Gurteen who is a leading thinker in this field **Agile Information Systems** Kevin C.
