time minimum variance filtering Generalisations for missing data deterministic inputs correlated noises direct feedthrough terms output estimation and equalisation are described Chapter 5 simplifies the minimum variance filtering results for steady state problems Observability Riccati equation solution convergence asymptotic stability and Wiener filter equivalence are discussed Chapters 6 and 7 cover the subject of continuous time and discrete time smoothing The main fixed lag fixed point and fixed interval smoother results are derived It is shown that the minimum variance fixed interval smoother attains the best performance Chapter 8 attends to parameter estimation As the above mentioned approaches all rely on knowledge of the underlying model parameters maximum likelihood techniques within expectation maximisation algorithms for joint state and parameter estimation are described Chapter 9 is concerned with robust techniques that accommodate uncertainties within problem specifications An extra term within Riccati equations enables designers to trade off average error and peak error performance Chapter 10 rounds off the course by applying the afore mentioned linear techniques to nonlinear estimation problems It is demonstrated that step wise linearisations can be used within predictors filters and smoothers albeit by forsaking optimal performance guarantees
