Weisel,2010-06-02 Tracing scientific ideas about the structure of Earth Global Warming creates an intellectual portrait of the shifts in thinking that have led to the current controversy enabling readers to make up their own minds on this important issue Global Warming takes one of the hot button issues of our time and surveys it in historical context creating an intellectual portrait of the multi century shifts in thinking that have led to gradual acceptance of the concept The book summarizes pertinent aspects of geology earth science and climate science in easy to read terms It then frames this background in terms of cultural and social shifts including the Industrial Revolution conspicuous consumption and modern environmentalism In addition a study of the ebb and flow of cultural and political reception relates the issue to religious and social ideas The information presented here will enable the reader to understand the scientific case stating that human activity has caused an unprecedented warming in the late 20th and early 21st centuries Technical and political objections to this thesis are also covered so that readers may form their own opinions on this critical subject **Modernity, the Environment, and the Christian Just War Tradition** Mark Douglas,2022-05-26 In this volume Mark Douglas presents an environmental history of the Christian just war tradition Focusing on the transition from its late medieval into its early modern form he explores the role the tradition has played in conditioning modernity and generating modernity s blindness to interactions between the natural and the political Douglas criticizes problematic myths that have driven conventional narratives about the history of the tradition and suggests a revised approach that better accounts for the evolution of that tradition through time Along the way he provides new interpretations of works by Francisco de Vitoria and Hugo Grotius and provocatively the Constitution of the United States of America Sitting at the intersection of just war thinking environmental history and theological ethics Douglas s book serves as a timely guide for responses to wars in a warming world as they increasingly revolve around the flashpoints of religion resources and refugees *World History* Steven Wallech,Touraj Daryaee,Craig Hendricks,Anne Lynne Negus,Peter P. Wan,Gordon Morris Bakken,2013-01-22 *World History A Concise Thematic Analysis* presents the highly anticipated second edition of the most affordable and accessible survey of world history designed for use at the college level An engaging narrative that contextualizes history and does not drown students in a sea of facts Offers a comparative analysis of the great civilizations of Eurasia Africa and the Americas Addresses themes of population dynamics food production challenges disease history warfare and other major issues for civilizations Features new interior design and organization to enhance user experience Instructor s test bank available online at <http://www.wiley.com/go/wallech> Hope and Grief in the Anthropocene Lesley Head,2016-02-22 The Anthropocene is a volatile and potentially catastrophic age demanding new ways of thinking about relations between humans and the nonhuman world This book explores how responses to environmental challenges are hampered by a grief for a pristine and certain past rather than considering the scale of the necessary socioeconomic change for a future world Conceptualisations of human nature relations must recognise both human power and its embeddedness within material relations Hope is a risky and complex process of

possibility that carries painful emotions it is something to be practised rather than felt As centralised governmental solutions regarding climate change appear insufficient intellectual and practical resources can be derived from everyday understandings and practices Empirical examples from rural and urban contexts and with diverse research participants indigenous communities climate scientists weed managers suburban householders help us to consider capacity vulnerability and hope in new ways

Drought and the Human Story R.L. Heathcote,2016-05-13 Drought has been a long companion in the human story Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia drought has continued to wreak havoc upon societies in many cases playing a significant role in their final demise For societies in the 21st Century drought hovers on all horizons the ultimate drought proofing of society long sought remains elusive This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult To offer a more lasting strategy for protection against drought the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists awareness of the socio economic political and cultural contexts in which modern societies operate Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public If this cooperation can be achieved the future rampages of the Bull of Heaven may be contained

Cooperation and Collective Action David M. Carballo,2012-12-15 Past archaeological literature on cooperation theory has emphasized competition s role in cultural evolution As a result bottom up possibilities for group cooperation have been under theorized in favor of models stressing top down leadership while evidence from a range of disciplines has demonstrated humans to effectively sustain cooperative undertakings through a number of social norms and institutions Cooperation and Collective Action is the first volume to focus on the use of archaeological evidence to understand cooperation and collective action Disentangling the motivations and institutions that foster group cooperation among competitive individuals remains one of the few great conundrums within evolutionary theory The breadth and material focus of archaeology provide a much needed complement to existing research on cooperation and collective action which thus far has relied largely on game theoretic modeling surveys of college students from affluent countries brief ethnographic experiments and limited historic cases In Cooperation and Collective Action diverse case studies address the evolution of the emergence of norms institutions and symbols of complex societies through the last 10 000 years This book is an important contribution to the literature on cooperation in human societies that will appeal to archaeologists and other scholars interested in cooperation research

Culture and the Changing Environment Michael J. Casimir,2009 Today human ecology has split into many different sub disciplines such as historical ecology political ecology or the New Ecological Anthropology The latter in particular has criticised the predominance of the Western view on different ecosystems arguing that culture specific world views and

human environment interactions have been largely neglected. However, these different perspectives only tackle specific facets of a local and global hyper-complex reality. In bringing together a variety of views and theoretical approaches, these especially commissioned essays prove that an interdisciplinary collaboration and understanding of the extreme complexity of the human environment interface is possible.

Christian Pacifism for an Environmental Age Mark Douglas, 2019-04-25 Provides a new understanding of the traditions of Christian pacifism in order to address wars in a warming world

Weathered Mike Hulme, 2016-06-15 Climate is an enduring idea of the human mind and also a powerful one. Today the idea of climate is most commonly associated with the discourse of climate change and its scientific, political, economic, social, religious, and ethical dimensions. However, to understand adequately the cultural politics of climate change, it is important to establish the different origins of the idea of climate itself and the range of historical, political, and cultural work that the idea of climate accomplishes. In *Weathered: Cultures of Climate*, distinguished professor Mike Hulme opens up the many ways in which the idea of climate is given shape and meaning in different human cultures, how climates are historicized, known, changed, lived with, blamed, feared, represented, predicted, governed, and at least putatively re-designed.

[Global Environments Through the Quaternary](#) David E. Anderson, Andrew S. Goudie, Adrian G. Parker, 2007-01-25 *Global Environments through the Quaternary* delves into the environmental changes that have taken place during the Quaternary, the two to three million years during which man has inhabited the Earth. It is essential reading for any student seeking a balanced, objective overview of this truly interdisciplinary subject.

City at the Water's Edge Betsy McCully, 2007 Concrete floors and concrete walls, buildings that pierce the sky, taxicabs and subway corridors, a steady din of noise. These things, along with a virtually unrivaled collection of museums, galleries, performance venues, media outlets, international corporations, and stock exchanges, make New York City not only the cultural and financial capital of the United States but one of the largest and most impressive urban conglomerations in the world. With distinctions like these, is it possible to imagine the city as any more than this? *City at the Water's Edge* invites readers to do just that. Betsy McCully, a long-time urban dweller, argues that this city of lights is much more than a human-made metropolis. It has a rich natural history that is every bit as fascinating as the glitzy veneer that has been built atop it. Through twenty years of nature exploration, McCully has come to know New York as part of the Lower Hudson Bioregion, a place of salt marshes and estuaries, sand dunes and barrier islands, glacially sculpted ridges and kettle holes, rivers and streams, woodlands, and outwash plains. Here she tells the story of New York that began before the first humans settled in the region twelve thousand years ago and long before immigrants ever arrived at Ellis Island. The timeline that she recounts is one that extends backward half a billion years; it plumbs the depths of Manhattan's geological history and forecasts a possible future of global warming with rising seas lapping at the base of the Empire State Building. Counter to popular views that see the city as a marvel of human ingenuity, diametrically opposed to nature, this unique account shows how the region has served as an evolving habitat for a diversity of species, including our own. The author chronicles the

growth of the city at the expense of the environment but leaves the reader with a vision of a future city as a human habitat that is brought into balance with nature *Protecting the Environment: 30 Years of U.S. Progress*, **The Global Climate System** Howard A. Bridgman, John E. Oliver, 2014-03-06 Over the last 20 years developments in climatology have provided an amazing array of explanations for the pattern of world climates This textbook first published in 2006 examines the earth's climate systems in light of this incredible growth in data availability data retrieval systems and satellite and computer applications It considers regional climate anomalies developments in teleconnections unusual sequences of recent climate change and human impacts upon the climate system The physical climate forms the main part of the book but it also considers social and economic aspects of the global climate system This textbook has been derived from the authors extensive experience of teaching climatology and atmospheric science Each chapter contains an essay by a specialist in the field to enhance the understanding of selected topics An extensive bibliography is included and lists of websites for further study This textbook will be invaluable to advanced students of climatology and atmospheric science **The Carbon Crunch** Dieter Helm, 2015-01-01 In a new edition of his hard hitting book on climate change economist Dieter Helm looks at how and why we have failed to tackle the issue of global warming and argues for a new pragmatic rethinking of energy policy An optimistically levelheaded book about actually dealing with global warming Kirkus Reviews starred review Dieter Helm has turned his agile mind to one of the great problems of our age why the world's efforts to curb the carbon dioxide emissions behind global warming have gone so wrong and how it can do better Pilita Clark Financial Times **The Global Carbon Cycle** David Archer, 2010-11-01 A must have introduction to this fundamental driver of the climate system The Global Carbon Cycle is a short introduction to this essential geochemical driver of the Earth's climate system written by one of the world's leading climate science experts In this one of a kind primer David Archer engages readers in clear and simple terms about the many ways the global carbon cycle is woven into our climate system He begins with a concise overview of the subject and then looks at the carbon cycle on three different time scales describing how the cycle interacts with climate in very distinct ways in each On million year time scales feedbacks in the carbon cycle stabilize Earth's climate and oxygen concentrations Archer explains how on hundred thousand year glacial interglacial time scales the carbon cycle in the ocean amplifies climate change and how on the human time scale of decades the carbon cycle has been dampening climate change by absorbing fossil fuel carbon dioxide into the oceans and land biosphere A central question of the book is whether the carbon cycle could once again act to amplify climate change in centuries to come for example through melting permafrost peatlands and methane hydrates The Global Carbon Cycle features a glossary of terms suggestions for further reading and explanations of equations as well as a forward looking discussion of open questions about the global carbon cycle
