Local Modelling of Non-Local Dependencies in Syntax Artemis Alexiadou,Tibor Kiss,Gereon Müller,2012-12-06 Syntactic dependencies are often non local They can involve two positions in a syntactic structure whose correspondence cannot be captured by invoking concepts like minimal clause or predicate argument structure Relevant phenomena include long distance movement long distance reflexivization long distance agreement control non local deletion long distance case assignment consecutio temporum extended scope of negation and semantic binding of pronouns A recurring strategy pursued in many contemporary syntactic theories is to model cases of non local dependencies in a strictly local way by successively passing on the relevant information in small domains of syntactic structures The present volume brings together eighteen articles that investigate non local dependencies in movement agreement binding scope and deletion constructions from different theoretical backgrounds among them versions of the Minimalist Program HPSG and Categorical Grammar and based on evidence from a variety of typologically distinct languages This way advantages and disadvantages of local treatments of non local dependencies become evident Furthermore it turns out that local analyses of non local phenomena developed in different syntactic theories spanning the derivational declarative divide often may not only share identical research questions but also rely on identical research strategies
