On Innovation of Treatment of Cancer BinWu,XuJie,XuZe,2015-12-28 This is the first complete collection book which describes how we searched our anticancer immune regulation medications which all of our animal and clinical experiments were done by skilled surgeons and were very challenging and hard work. Chinese medicine has 5000 years history which we found that many of Chinese anticancer medications are to improve our immune system function. Dr Xu Ze's innovation of research designing and methods to test our medications is the first and advanced in the world oncology fields.

Conquer cancer go Where are our roads to go Dr Xu Ze thinks the roads are in scientific research on cancer prevention and treatment of scientific research the roads in research under scientific guidance of the scientific concept of development. Science is an endless frontier our scientific work has followed the scientific concept of development based on the known medical future oriented medicine new disciplines interdisciplinary cross disciplinary based on the known material science to explore the future of science and unknown knowledge. Look forward through the static mind a long term hard work and practice the scientific concept of development in scientific difficult journey a scientific step by step and step to the forefront of science for innovative and forward to overcome cancer research hall brick by brick.

Full color format throughout and full color illustrations make information more accessible and provide accurate representations of clinical appearance. Chapters are clustered into four major sections: The Biology and Pathogenesis of Cancer; Diagnostic Procedures for the Cancer Patient; Therapeutic Modalities for the Cancer Patient; and Specific Malignancies in the Small Animal Patient. The consistent format includes incidence and risk factors pathology natural behavior of tumors history and clinical signs diagnostic techniques and workup treatment options and prognosis for specific malignancies in the small animal cancer patient. Features cutting edge information on the complications of cancer pain management and the latest treatment modalities. The latest information on the etiology of cancer including genetic chemical physical and hormonal factors as well as cancer causing viruses. Coverage of molecular targeted therapy of cancer plus new

and emerging therapeutic techniques New information on molecular diagnostic procedures for the cancer patient The latest diagnostic imaging techniques in clinical oncology Discussions of compassion and supportive care from chronic pain management and nutrition to end of life issues and grief support

Post-Translational Modifications (PTMs) in Human Cancer: Pharmacological Insights and Therapeutic Opportunities Lei Huang, Hang Song, Pedro Ayuso Parejo, 2025-08-21

Human cancer is a complex and heterogeneous group of diseases characterized by uncontrolled cell growth and proliferation Post translational modifications PTMs of proteins play a critical role in cancer development and progression PTMs are chemical modifications that occur after a protein is synthesized and can significantly impact the function localization stability and activity of proteins within a cell Pharmacology is a field of medicine that focuses on the study of drugs and their effects on the human body Pharmacological interventions that target PTMs are a promising area of cancer research and treatment For example PARP Inhibitors Poly ADP ribose polymerase PARP inhibitors are a class of drugs that exploit defects in DNA repair mechanisms particularly in cells with BRCA mutations These inhibitors target the PARP protein which plays a role in DNA repair through PTM processes PARP inhibitors like olaparib and rucaparib have been approved for the treatment of ovarian and breast cancers Ubiquitin Proteasome System UPS Inhibitors The UPS is responsible for the degradation of specific proteins tagged with ubiquitin Some drugs such as bortezomib inhibit the UPS leading to the accumulation of ubiquitinated proteins and apoptosis in cancer cells SUMOylation Inhibitors Small ubiquitin like modifier SUMO modification is a PTM that regulates the activity of various proteins Recent research has explored the development of SUMOylation inhibitors to target specific cancer related proteins These are still in the experimental stage The effectiveness of these treatments varies depending on the specific cancer type genetic mutations and individual patient characteristics It is important to note that the development and application of these therapies often require a deep understanding of the specific PTMs and their roles in the molecular pathways of different cancer types Additionally personalized medicine approaches are becoming increasingly common tailoring treatments based on the unique PTM profiles and genetic mutations of individual patients tumors Personalized medicine also known as precision medicine is being pursued in cancer treatment for several compelling reasons and it offers several benefits compared to more traditional one size fits all approaches Personalized medicine offers targeted treatment increased treatment efficacy reduced side effects and optimized drug selection among many other benefits This Research Topic will focus on post translational modifications PTMs and their role in human cancer within the field of pharmacology This is a highly relevant and significant area of study as understanding how PTMs contribute to cancer development and progression is critical for the development of targeted pharmacological interventions We welcome contributions in the form of Original Research Articles Reviews and Mini Reviews that cover but are not limited to the following topics a Post Translational Modifications PTMs in Cancer Molecular Mechanisms b Pharmacological Approaches Targeting PTMs in Cancer c Personalized Medicine and PTM Profiles d Emerging

Trends and Future Directions Please note that If patient data are analyzed a comprehensive description of the patients including sex age diagnostic criteria inclusion and exclusion criteria disease stage therapy received comorbidities as well as additional clinical information and assessment of clinical response effects should be included If genetic proteomics metabolomics or other omics data are analyzed a comprehensive description of the methods and the rationale for the selection of the specific data studied should be provided Studies related to natural compounds herbal extracts or traditional medicine products will not be included in this Research Topic Studies solely based on the analysis of public databases or published evidence with no further experimental insights or experimental validation will not be included in this Research Topic
