Ahorro de Combustible Y de Costos Para Armadores de Pequeñas Embarcaciones Pesqueras Wilson, J.D.K., Food and Agriculture Organization of the United Nations, 2005-05-30 La pesca sigue siendo el método de producción de alimentos que requiere más intensidad de energía en el mundo y depende casi totalmente del uso de motores de combustión interna que funcionan con derivados del petróleo Hasta ahora no hay indicios de que otra fuente de energía podría llegar a sustituir el uso de estos motores a mediano o corto plazo La industria sigue siendo sensible a los precios mundiales de los combustibles y no cabe suponer que estos se mantengan indefinidamente estables Las actividades pesqueras en pequeña escala aportan casi la mitad de la producción mundial de pescado y aunque en general requieren una mayor intensidad de mano de obra que las grandes actividades pesqueras industriales se ven cada vez más afectadas por los costos de la energía Los costos de los combustibles tienen una influencia creciente no solo en los precios al consumidor sino también en los ingresos netos de los pescadores y los propietarios de embarcaciones Esta obra se divide en dos secciones principales la primera se refiere a los cambios de las técnicas operativas en lugar de a los cambios tecnológicos la segunda presenta información pertinente para los armadores que estén pensando en construir una nueva embarcación o revisar y reacondicionar una ya existente
