This can be helpful for researchers, scholars, and practitioners who want to have an updated guide on the state of the art technological innovation management. *On the Move to Meaningful Internet Systems: OTM 2009 Workshops* Robert Meersman, Pilar Herrero, Tharam Dillon, 2009-11-06. Internet based information systems, the second covering the large scale integration of heterogeneous computing systems and data resources with the aim of providing a global computing space. Each of these four conferences encourages researchers to treat their respective topics within a framework that incorporates jointly a theory, b) conceptual design and development, and c) applications in particular case studies and industrial solutions. Following and expanding the model created in 2003, we again solicited and selected quality workshop proposals to complement the more archival nature of the main conferences with research results in a number of selected and more avant garde areas related to the general topic of Web based distributed computing. For instance, the so called Semantic Web has given rise to several novel research areas combining linguistics, information systems, technology, and artificial intelligence such as the modeling of legal regulatory systems and the ubiquitous nature of their usage. We were glad to see that ten of our earlier successful workshops ADI, CAMS, EI2N, SWWS, ORM, OnToContent, MONET, SEMELS, COMBEK, IWSSA reappeared in 2008 with a second, third, or even fourth edition, sometimes by alliance with other newly emerging workshops, and that no fewer than three brand new independent workshops could be selected from proposals and hosted. ISDE, ODIS, and Beyond SAWSDL Workshop diences productively mingled with each other and with those of the main conferences, and there was considerable overlap in authors. Federal Register, 1999.
