Testing of Metallic and Inorganic Coatings William B. Harding, 1987 Coatings are tested to confirm compliance with specifications to monitor the operation of a coating process and to evaluate coatings for various services The ability of a coating to perform as intended usually depends on several characteristics and the testing of a coating usually involves several different tests At first glance the nature of a characteristic that is being tested may seem clear and the results of a test may seem to be unambiguous however the nature of a characteristic may be more complex than realized and the ability of a test to measure the characteristic may be less than expected The members of the ASTM Committee B 8 on Metallic and Inorganic Coatings felt it was desirable to organize a symposium on the testing of the metallic and inorganic coatings so as to bring these problems to the attention of practitioners This publication is based on the symposium which was presented in Chicago on April 14 and 15 1986
