New Consumers The Influence Of Affluence On The Environment:

The New Consumers Norman Myers, Jennifer Kent, 2013-04-10 While overconsumption by the developed world's roughly one billion inhabitants is an abiding problem another one billion increasingly affluent new consumers in developing countries will place additional strains on the earth's resources argue authors Norman Myers and Jennifer Kent in this important new book *The New Consumers* examines the environmental impacts of this increased consumption with particular focus on two commodities cars and meat that stand to have the most far reaching effects It analyzes consumption patterns in a number of different countries with special emphasis on China and India whose surging economies as well as their large populations are likely to account for exceptional growth in humanity's ecological footprint and surveys big picture issues such as the globalization of economies consumer goods and lifestyles Ultimately according to the orman Myers and Jennifer Kent the challenge will be for all of humanity to transition to sustainable levels of consumption for it is unrealistic to expect new consumers not to aspire to be like the old ones Cogent in its analysis *The New Consumers* issues a timely warning of a major and developing environmental trend and suggests valuable strategies for ameliorating its effects

The Future of Consumer Society Maurie J. Cohen, 2016-11-03 Consumer society in the United States and other countries is receding due to demographic ageing rising income inequality political paralysis and resource scarcity At the same time steady jobs that compensate employees on a salaried or hourly basis are being replaced by freelancing and contingent work The rise of the so called sharing economy the growth of do it yourself production and the spreading popularity of economic localization are evidence that people are striving to find new ways to ensure livelihoods for themselves and their families in the face of profound change Indications are that we are at the early stages of a transition away from a system of social organization predicated on consumerism These developments have prompted some policy makers to suggest providing households with a non labor source of income that would enable more adequate satisfaction of their basic needs These proposals include a universal basic income a citizen's dividend and a legal framework for broad based stock ownership in corporations However extreme political fractiousness makes it unlikely that these recommendations will receive prompt and widespread legislative endorsement in most countries In the meantime we seem to be moving incontrovertibly toward a twenty first century version of feudalism How might we chart a different path founded on social inclusiveness and economic security A practicable option entails establishment of networks of interlinked worker consumer cooperatives that organizationally unify production and consumer Such modes of mutual assistance already exist and *The Future of Consumer Society* profiles several successful examples from around the world If replicated and scaled worker consumer cooperatives could smooth the transition beyond consumer society and facilitate a future premised on sufficiency resiliency and well being

Material Geographies of Household Sustainability Andrew Gorman-Murray, 2016-05-13 Charting new research directions this book constructs a series of imperatives for linking culturally informed research around household sustainability with policy and planning The household or home is a critical scale for understanding activities that connect individual behaviours and societal attitudes The focus on the household in this collection provides a window into the sheer diversity of homemaking and maintenance activities that entail resource use These practices have affective or emotive dimensions as well as habitual aspects Diversity innovation and change at the household scale is often missed in policy approaches which assume that simplistic economic motivations drive demand and this can in turn be managed through regulation or market pricing The research challenge extends beyond describing existing unsustainable economies driving resource intensive behaviour to consider realistic options for transformations in cultural practices material relationships and ultimately the political economies they sit within Without change in these systems government initiatives to promote ecological modernisation run the risk of simply green washing the very economies of consumption that currently drive unsustainable practices Social and cultural change at the household level is critical to promoting sustainability at a range of wider scales

Sustainable Production Consumption Systems Louis Lebel, Sylvia Lorek, Rajesh Daniel, 2009-12-02 Sustainable Production Consumption Systems brings together a set of designed case studies intended to provide a more in depth understanding of challenges and opportunities in bringing knowledge and actions closer together for the sustainable management of specific production and consumption systems The case study approach enabled researchers to engage directly with some of the actors involved in the production consumption or regulation of specific goods or services and other stakeholders affected by those processes Such engagement was particularly worthwhile when it helped mobilize actors to pursue linking knowledge with action in ways that improve the prospects for sustainability

Routledge Handbook of Climate Change and Society Constance Lever-Tracy, 2010-07-12 As the time scales of natural change accelerate and converge with those of society, the Routledge Handbook of Climate Change and Society takes the reader into largely uncharted territory in its exploration of anthropogenic climate change. Current material is used to highlight the global impact of this issue and the necessity for multidisciplinary and global social science research and teaching to address the problem. The book is multidisciplinary and worldwide in scope, with contributors spanning specialisms including agroforestry, economics, environmentalism, ethics, human geography, international relations, law, politics, psychology, sociology, and theology. Their global knowledge is reflected in the content of the text, which encompasses chapters on American, European, and Chinese policies; case studies of responses to disasters; and of the new technological and lifestyle alternatives that are being adopted and the negotiations leading up to the Copenhagen conference, alongside a preface assessing its outcomes. Starting with an initial analysis by a leading climatologist, key issues discussed in the text include recent findings of natural scientists, social causation, and vulnerability; media and public recognition or scepticism; and the merits and difficulties of actions seeking to mitigate and adapt. This accessible volume utilizes a wealth of case studies, explains technical terms, and minimises the use of acronyms associated with the subject, making it an essential text for advanced undergraduates, postgraduate students, and researchers in the social sciences.
