No More Hysterectomies:

No More Hysterectomies Vicki Hufnagel, Susan K. Golant, 1988 The average woman has about a 50 percent chance of undergoing a hysterectomy before age 65 Dr Hufnagel believes as many as 92 percent of these operations are unnecessary She tells how to avoid these operations and gives alternative treatments **Sex, Lies and the Truth about Uterine Fibroids** Carla Dionne, 2001 Draws on personal anecdotes and case studies to examine the range of treatments available to uterine fibroids sufferers and provides a look at traditional surgical and alternative therapies **Hysterectomy in Women Aged 15-44, Summary 1970-1975** ,1980 *The Sterilization Movement and Global Fertility in the Twentieth Century* Ian Robert Dowbiggin, 2008 Many would be surprised to learn that the preferred method of birth control in the United States today is actually surgical sterilization This book takes an historical look at the sterilization movement in post World War II America a revolution in modern contraceptive behavior Focusing on leaders of the sterilization movement from the 1930 s through the turn of the century this book explores the historic linkages between environment civil liberties eugenics population control sex education marriage counseling and birth control movements in the 20th century United States Sterilization has been variously advocated as a medical procedure for defusing the population bomb expanding individual rights liberating women from the fear of pregnancy strengthening marriage improving the quality of life of the mentally disabled or reducing the incidence of hereditary disorders From an historical standpoint support for free and unfettered access to sterilization services has aroused opposition in some circles and was considered a liberal cause in post World War II America This story demonstrates how a small group of reformers helped to alter traditional notions of gender and sexuality

Surgery and Its Alternatives Sandra A. McLanahan, David J. McLanahan, 2003-04-01 Provides a discussion of both surgical and alternative approaches to an array of medical issues revealing the pros and cons of various anesthetic and surgical options and describing more than two hundred procedures **Childfree and Sterilized** Annily Campbell, 1999-01-01 This book examines the relatively new social and medical phenomenon of women in the developed countries of the world choosing to remain childfree and electing for sterilization rather than continuing with other forms of contraception Twenty three voluntarily childfree sterilized women aged 22 to 51 years tell their stories revealing the

struggles they faced in being women without children in a society which expects women to be mothers They describe the many barriers encountered on the way to being sterilized including prejudice from those around them as well as hostility and refusal from the medical profession The women recall how their reasons and decisions were ignored or pathologized by doctors who held unquestioned assumptions about how women should be Feminist and sociological perspectives are employed to highlight that voluntarily childfree women are perceived as abnormal not real women and are often the target of negative and critical comment
