

SHEEP OR GOAT?

Female sheep are called ewes, male sheep are called rams, and the young are called lambs. Only rams will grow horns, but many sheep are naturally hornless.

WHAT'S THE SAME?

Sheep and goats have many similarities:

They are both ruminants, meaning they have four-compartment stomachs and will chew their cud. This helps them acquire more nutrients from the plants they eat.

Female sheep and goats have two teeth for feeding their young, unlike a cow, which has four teeth. The interesting thing about this is that while a cow will typically only have one calf, a sheep or goat will have 1 to 5 babies. Twins are quite common for both sheep and goats.

Other physical similarities include having two hooved toes on each foot, teeth only on their bottom jaw, and rectangular pupils for avoiding predators on rugged terrain.

Sheep and goats are both raised for meat and milk.

Female goats are called does, male goats are called bucks, and the young are called kids. Male and female goats will grow horns.

WHAT'S DIFFERENT?

- While a few sheep breeds do have hair, most sheep are covered in wool. Unlike hair, wool fibers stretch. Sheep also produce an oily substance called lanolin in their wool. It can be removed from the wool and used in medicine, health and beauty products. Wool is a valuable product that goats cannot produce.

- A sheep's tail is much longer than a goat's, and it hangs down. They are often docked for sanitary reasons.

- Sheep are greener and pickier eaters than goats. They prefer tender, broad-leaved plants close to the soil.

- Goats are natural browsers, preferring to eat leaves, twigs, vines, and shrubs. They are very agile and will stand on their hind legs to reach vegetation. Goats also like to eat the tops of plants, and typically have more nutritious diets than sheep. Some farmers rent out their herds of goats to clear an area of overgrown vegetation.

- Sheep and goats usually exhibit different behavior. Goats are naturally curious and independent, while sheep tend to be more distant and aloof. Sheep have a stronger flocking instinct and become very agitated if they are separated from the rest of the flock. It is easier to keep sheep inside a fence than goats.

Sheep have a split upper lip.

Goats have short, upright tails and different ear shapes. Some goats have no ears at all.

and from Arabs to Norman/Aragonese (7th-14th c. AD) Veronica Aniceti, 2022-12-30 The work presented in this book

opens a new window on the history and archaeology of medieval Sicily by focusing on the development of human animal

relationships from Byzantine times to the later Middle Ages This large scale study of animal bones and teeth relies on the

analysis of material from old and recent excavations as well as on a comprehensive review of data available from the

literature The results shed light on two major lines of investigation on Arab and Norman Aragonese Sicily the influence of

different dominations on dietary practices most notably the extent to which the taboo on pork consumption spread in the
