National Conference On Artificial Intelligence Proceedings 18 August 1983:

Expert Systems in Engineering Applications Spyros Tzafestas,2012-12-06 Expert system technology is receiving increasing popularity and acceptance in the engineering community This is due to the fact that there actually exists a close match between the capabilities of the current generation expert systems and the requirements of engineering practice Prepared by a distinguished team of experts this book provides a balanced state of the art presentation of the design principles of engineering expert systems and a representative picture of their capabilities to assist efficiently the design diagnosis and operation of complex industrial plants Among the application areas covered are the following hardware synthesis industrial plant layout design fault diagnosis process control image analysis computer communication electric power systems intelligent control robotics and manufacturing systems The book is appropriate for the researcher and the professional The researcher can save considerable time in searching the scattered technical information on engineering expert systems The professional can have readily available a rich set of guidelines and techniques that are applicable to a wide class of engineering domains   **GWAI-84** Joachim Laubsch,2012-12-06   **IEEE ... Computer Society Conference on Artificial Intelligence Applications** ,1985   *Introduction to Artificial Intelligence* Philip C. Jackson,2013-02-19 Comprehensive survey of artificial intelligence the study of how computers can be made to act intelligently Includes introductory and advanced material Extensive notes updating the main text 132 illustrations   National Library of Medicine Current Catalog National Library of Medicine (U.S.),   *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70   **Books in Print** ,1991   **Computational Intelligence, II** G. Mauri,M. Filippini,F. Gardin,1990-06-01 The focus of this volume is Heterogeneous Knowledge and Problem Solving Integration i e the combined use of different knowledge representation and problem solving paradigms This is a central topic for the design and implementation of problem solving systems since from a pragmatic and engineering standpoint the solution of a large class of problems cannot take place within one single representation language or problem solving paradigm Heterogeneous systems represent not only a pragmatic answer but also a theoretical alternative to the homogeneous paradigms   **Distributed Artificial Intelligence** Michael N. Huhns,2012-12-02 Distributed Artificial Intelligence presents a collection of papers describing the state of research in distributed artificial intelligence DAI DAI is concerned with the cooperative solution of problems by a decentralized group of agents The agents may range from simple processing elements to complex entities exhibiting rational behavior The book is organized into three parts Part I addresses ways to develop control abstractions that efficiently guide problem solving communication abstractions that yield cooperation and description abstractions that result in effective organizational structure Part II describes architectures for developing and testing DAI systems Part III discusses applications of DAI in manufacturing office automation and man machine interactions This book is intended for researchers system developers and students in artificial intelligence and related disciplines It can also be used as a reference for students

and researchers in other disciplines such as psychology philosophy robotics and distributed computing who wish to understand the issues of DAI   *Artificial Intelligence in Engineering Design* Bozzano G Luisa,2012-12-02 Artificial Intelligence in Engineering Design Volume II Models of Innovative Design Reasoning About Physical Systems and Reasoning About Geometry focuses on the processes programs techniques and technologies involved in the employment of artificial intelligence in engineering design The selection first takes a look at the automated reuse of design plans in BOGART and ARGO an analogical reasoning system for solving design problems Topics include analogy mechanisms in ARGO analogical reasoning and learning ARGO development environment using VEXED to construct a design plan and how BOGART reuses a design plan The text then ponders on retrieval strategies in a case based design system and case based design including the functions to structure design task in the domain of physical devices design retrieval proposition and modification and the multi layered case representation The publication examines mechanism comparison and classification for design a case based approach to the design of mechanical linkages and studies of heuristic knowledge based approaches for automated configuration generation and innovation Topics include applications of stress field estimation to geometric optimization simplification and abstraction operators mechanism comparison and classification linkage synthesis analytic synthesis techniques and system architecture The selection is a valuable reference for readers interested in the use of artificial intelligence in engineering design   Artificial Intelligence in the Pacific Rim Hozumi Tanaka,1991 In the last decade AI firmly settled into our industrial society with the expert systems as the representative product However almost every one of the systems could cover only a single task domain In the highly mechanized world of the 21st century systems will become smart and user friendly enough to cover a wide range of task domains Systems with much user friendliness must be multilingual because users in different domains usually have different languages Language is formed in its own culture Therefore promotion for cross cultural scientific interchange will be indispensable for the progress of AI   Readings in Artificial Intelligence and Databases John Mylopoulos,Michael L. Brodie,2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and knowledge bases natural language front ends object oriented database management

systems implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases logic programming and AI **Logic Programming** I. Balbin,K. Lecot,2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of SJmbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography *Program of the Ninth Annual Conference of the Cognitive Science Society* Cognitive Science Society (U.S.). Conference,1987 First Published in 1987 Routledge is an imprint of Taylor Francis an informa company Readings in Qualitative Reasoning About Physical Systems Daniel S. Weld,Johan De Kleer,2013-09-17 Readings in Qualitative Reasoning about Physical Systems describes the automated reasoning about the physical world using qualitative representations This text is divided into nine chapters each focusing on some aspect of qualitative physics The first chapter deal with qualitative physics which is concerned with representing and reasoning about the physical world The goal of qualitative physics is to capture both the commonsense knowledge of the person on the street and the tacit knowledge underlying the quantitative knowledge used by engineers and scientists The succeeding chapter discusses the qualitative calculus and its role in constructing an envisionment that includes behavior over both mythical time and elapsed time These topics are followed by reviews of the mathematical aspects of qualitative reasoning history based simulation and temporal reasoning as well as the intelligence in scientific computing The final chapters are devoted to automated modeling for qualitative reasoning and causal explanations of behavior These chapters also examine the qualitative kinematics of reasoning about shape and space This book will prove useful to psychologists and psychiatrists *Readings in Distributed Artificial Intelligence* Alan H. Bond,Les Gasser,2014-06-05 Most artificial intelligence research investigates intelligent behavior for a single agent solving problems heuristically understanding natural language and so on Distributed Artificial Intelligence DAI is concerned with coordinated intelligent behavior intelligent agents coordinating their knowledge skills and plans to act or solve problems working toward a single goal or toward separate individual goals that interact DAI provides intellectual insights about organization interaction and problem solving among intelligent agents This comprehensive

collection of articles shows the breadth and depth of DAI research The selected information is relevant to emerging DAI technologies as well as to practical problems in artificial intelligence distributed computing systems and human computer interaction Readings in Distributed Artificial Intelligence proposes a framework for understanding the problems and possibilities of DAI It divides the study into three realms the natural systems approach emulating strategies and representations people use to coordinate their activities the engineering science perspective building automated coordinated problem solvers for specific applications and a third hybrid approach that is useful in analyzing and developing mixed collections of machines and human agents working together The editors introduce the volume with an important survey of the motivations research and results of work in DAI This historical and conceptual overview combines with chapter introductions to guide the reader through this fascinating field A unique and extensive bibliography is also provided

Intelligent CAD Systems I Paul J.W. ten Hagen,Tetsuo Tomiyama,2012-12-06 CAD Computer Aided Design technology is now crucial for every division of modern industry from a viewpoint of higher productivity and better products As technologies advance the amount of information and knowledge that engineers have to deal with is constantly increasing This results in seeking more advanced computer technology to achieve higher functionalities flexibility and efficient performance of the CAD systems Knowledge engineering or more broadly artificial intelligence is considered a primary candidate technology to build a new generation of CAD systems Since design is a very intellectual human activity this approach seems to make sense The ideas of intelligent CAD systems ICAD are now increasingly discussed everywhere We can observe many conferences and workshops reporting a number of research efforts on this particular subject Researchers are coming from computer science artificial intelligence mechanical engineering electronic engineering civil engineering architectural science control engineering etc But still we cannot see the direction of this concept or at least there is no widely accepted concept of ICAD What can designers expect from these future generation CAD systems In which direction must developers proceed The situation is somewhat confusing   Surfaces in Range Image Understanding Paul J. Besl,2012-12-06 Machine perception requires the digitization of physically sensed signals During the last ten years digital range images have become available from a variety of sensors This book is devoted to the problem of range image understanding with computers Its aims are to develop a theoretical framework devise appropriate algorithms and demonstrate a software implementation of those algorithms that will confirm the usefulness of surfaces in range image understanding It will be of interest to the researcher studying the theoretical concepts of image understanding as well as the engineer who wants to implement these concepts in practical applications   **Signal** ,1988   *VLSI Design Environments* George Zobrist,2000-04-17 VLSI Design Environments investigates design alternatives such as object oriented data modelling The difficulty of automating chip architecture designs is caused by the complexity of the problem The explosion of design decions make a heuristic approach necessary PLAYOUT aims at the solution of system problems based on hierarchy top down plannin
