Terrestrial Propagation of Long Electromagnetic Waves Janis Galejs, 2013-10-22 Terrestrial Propagation of Long Electromagnetic Waves deals with the propagation of long electromagnetic waves confined principally to the shell between the earth and the ionosphere known as the terrestrial waveguide The discussion is limited to steady state solutions in a waveguide that is uniform in the direction of propagation Wave propagation is characterized almost exclusively by mode theory The mathematics are developed only for sources at the ground surface or within the waveguide including artificial sources as well as lightning discharges This volume is comprised of nine chapters and begins with an introduction to the fundamental concepts of wave propagation in a planar and curved isotropic waveguide A number of examples are presented to illustrate the effects of an anisotropic ionosphere The basic equations are summarized and plane wave reflection from a dielectric interface is considered along with the superposition of two obliquely incident plane waves The properties of waveguide boundaries are implicitly represented by Fresnel reflection coefficients Subsequent chapters focus on boundaries of the terrestrial guide lightning discharges as a natural source of extremely low frequency and very low frequency radiation and the mode theory for waves in an isotropic spherical shell This book will be a useful resource for students and practitioners of physics **Geophysical Abstracts ...** ,1965 *NBS Technical Note* ,1963 Mutual Interference Between Surface and Satellite Communication Systems (November, 1961) W. Guidance and Control Robert Roberson, 2012-12-02 Guidance and Control focuses on space guidance models and behavior control techniques needed in space missions Divided into eight parts with 30 chapters the book contains the literature of authors who have conducted extensive research on factors affecting space missions The concerns include ascent from Earth to an orbit requiring navigation as well as descent to Earth or the moon the system aspects of inertial navigation and developments in modern control theory and attitude control The text looks at experiments on the launch of space missions and the different mathematical techniques used to measure the movement of a variable mass vehicle The selection also notes the processes and techniques involved in keeping satellites in compatible orbits the influence of calculus of perturbations as applied to lunar mission analysis and tracking of space vehicles through satellites and radar The book also presents guidance systems for soft lunar landing and the longitudinal control of a lifting vehicle entering a planetary atmosphere Other concerns include the application of sideband folding techniques to navigation satellite system Damping an inertial navigation system and application of multiple inertial system in navigation The text ends by highlighting the use of gyroscopes in space navigation and infrared navigation sensors in space vehicles and how solar radiation affects pressure on satellite attitude control The book is valuable for readers interested in studying the factors involved in space missions
