Environment across Cultures E. Ehlers, Carl Friedrich Gethmann, 2013-11-11 Disparate perceptions and conceptual frameworks of environment and the relationship between humans and nature often lead to confusion constraints on co

operation and collaboration and even conflict when society tries to deal with today's urgent and complex environment research and policy challenges. Such disparities in perception and world view are driven by many factors. They include differences in culture, religion, ethical frameworks, scientific methodologies and approaches, disciplines, political, social and philosophical traditions, life styles and consumption patterns as well as alternative economic paradigms. Distribution of poverty or wealth between north and south may thus be seen as consequence of the above mentioned disparities which is a challenge for its universal reasoned evaluation. This volume discusses a wide range of factors influencing Environment across Cultures with a view to identifying ways and means to better understand, reflect and manage such disparities within future global environmental research and policy agendas for bridging the gap between ecology and economy as well as between societies. The book is based upon the results of a scientific symposium on this topic and covers the following sections: Cross Cultural Perception of Environment, Ethics and Nature, Environment Sustainability and Society. Corresponding contributions were made by well known scientific authors representing different cultural spheres in accordance with the inter cultural approach of this effort.

Children, Nature and Cities Claire Freeman, Yolanda van Heezik, 2018-06-14. That children need nature for health and well being is widely accepted but what type of nature? Specifically what type of nature is not only necessary but realistically available in the complex and rapidly changing worlds that children currently live in. This book examines child nature definitions through two related concepts: the need for connecting to nature and the processes by which opportunities for such contact can be enhanced. It analyses the available nature from a scientific perspective of habitats, species and environments together with the role of planning to identify how children in cities can and do connect with nature. This book challenges the notion of a universal child and childhood by recognizing children's diverse life worlds and experiences which guide them into different and complex ways of interacting with the natural world. Unfortunately not all children have the freedom to access the nature that is present in the cities where they live. This book addresses the challenge of designing biodiverse cities in which nature is readily accessible to children.

Can Different Cultures Think the Same Thoughts? Kenneth Dorter, 2018-04-30. A welcome contribution to the burgeoning multicultural revolution in philosophy persuasively shows that ethics cannot be innocent of metaphysics. Bryan W Van Norden, author of *Introduction to Classical Chinese Philosophy*. Kenneth Dorter's *Can Different Cultures Think the Same Thoughts* is a study of fundamental issues in metaphysics and ethics across major

philosophical traditions of the world including the way in which metaphysics can be a foundation for ethics as well as the importance of metaphysics on its own terms. Dorter examines such questions through a detailed comparison of selected major thinkers and classic works in three global philosophical traditions: those of India, China, and the West. In each chapter, Dorter juxtaposes and compares two or more philosophers or classic works from different traditions, from Spinoza and Shankara to Confucius and Plato to Marcus Aurelius and the Bhagavad Gita. In doing so, he explores different perspectives and reveals limitations and assumptions that might otherwise be obscure. The goal of Dorter's cross-cultural approach is to consider how far works from different cultures can be understood as holding comparable philosophical views. Although Dorter reveals commonalities across the different traditions, he makes no claim that there is such a thing as a universal philosophy. Clearly, there are fundamental disagreements among the philosophers and works studied. Yet in each of the case studies of a particular chapter, we can discover a shared or at least analogous way of looking at issues across different cultures. All those interested in metaphysics, ethics, Indian philosophy, Chinese philosophy, and comparative philosophy will find much of interest in this book.

Nature, Metaphor, Culture Judit Baranyiné Kóczy, 2017-11-03. This book analyses the emotional message of Hungarian folksongs from a Cultural Linguistic perspective, employing a wide range of empirical devices. It combines theoretical notions with analytical devices and has a multidisciplinary essence; it relies on the latest Cultural Linguistic findings, employing spatial semantics, cognitive linguistics, cognitive psychology, and ethnography. The book addresses key questions including: How is nature conceptualized by a folk cultural group? How are emotions and other mental states expressed via nature imagery with respect to metaphors and construal schemas? The author argues that folksongs reflect the Hungarian peasant communities' specific treatment of emotions captured in an underlying cultural schema, 'reservedness'. This schema is grounded in principles of morality and tradition and governs the various levels of representation. The main topics discussed are related to two core issues: cultural metaphors and cultural schemas of construal in folksongs. It provides a detailed example based on over 1000 folksongs of how a cultural group's cognition can be analyzed and better understood through a representative corpus-based linguistic approach. The research is also pioneering in constructing a comprehensive analysis framework adapted to folk poetry and offers an example of how cultural conceptualizations can be investigated in various discourse types. Last but not least, the book offers insights into the work of Hungarian linguists and folklorists concerning cultural conceptualizations, which have largely been unavailable in English.

[The Nature of Kingship](#) Kathryn Dyt, 2024-12-31

The Nature of Kingship is an innovative exploration of dynastic power and the environment in nineteenth century Vietnam It offers important insights into Vietnamese kingship by delving into the intricate workings of the Nguyen court and its interactions with the natural world Weaving together a rich array of sources including official histories royal poetry astrological manuals geography texts and provincial gazetteers Kathryn Dyt vividly demonstrates how Nguyen governance and court hierarchies were intertwined with a powerful agentive and emotional weather world a world inhabited by ecological actors such as rain wind land and skies While previous narratives have often faulted Nguyen rulers for being aloof

and detached from their surroundings this new study considers how Nguyen dynastic rule was in fact highly responsive to its setting and sensitive to the environment It shows that Nguyen kings were not static inert individuals cut off from the world but rather were intensely engaged with their environment and its cosmological and spiritual dimensions Placing kings in the thick of lived experience in a land perceived to be alive and responsive to human incantations prayers and pleas this account demonstrates how Nguyen rulers consolidated their authority through displays of superior weather knowledge and modes of affective rule rooted in reciprocal emotional resonance with the weather world The king's exemplary affective responsiveness to the weather was central to his preeminence and it was a means by which the court validated its power within Vietnam's extensive social field Exploring kingship from phenomenological perspectives this wide reaching study addresses diverse forms of court engagement with the environment including the observation of astronomical and meteorological phenomena divination practices rainmaking rituals travel through the kingdom the writing of environmental histories and imperial poetry

Nature and the Environment in Amish Life David L. McConnell, Marilyn D.

Loveless, 2018-11-01 The Amish relationship to the environment is much more complicated than you might think The pastoral image of Amish communities living simply and in touch with the land strikes a deep chord with many Americans Environmentalists have lauded the Amish as iconic models for a way of life that is local self sufficient and in harmony with nature But the Amish themselves do not always embrace their ecological reputation and critics have long questioned the portrayal of the Amish as models of environmental stewardship In *Nature and the Environment in Amish Life* David L. McConnell and Marilyn D. Loveless examine how this prevailing notion of the environmentally conscious Amish fits with the changing realities of their lives Drawing on 150 interviews conducted over the course of 7 years as well as a survey of household resource use among Amish and non Amish people they explore how the Amish understand nature in their daily

lives and how their actions impact the natural world Arguing that there is considerable diversity in Amish engagements with nature at home at school at work and outdoors McConnell and Loveless show how the Amish response to regional and global environmental issues such as watershed pollution and climate change reveals their deep skepticism of environmentalists They also demonstrate that Amish households are not uniformly lower in resource use compared to their rural non Amish neighbors though aspects of their home economy are relatively self sufficient The first comprehensive study of Amish understandings of the natural world this compelling book complicates the image of the Amish and provides a more realistic understanding of the Amish relationship with the environment

Conservation Concepts Kurt Jax, 2023-10-31 This book provides a review of the multitude of conservation concepts both from a scientific philosophical and social science perspective asking how we want to shape our relationships with nature as humans and providing guidance on which conservation approaches can help us to do this Nature conservation is a contested terrain and there is not only one idea about what constitutes conservation but many different ones which sometimes are conflicting Employing a conceptual and historical analysis this book sorts and interprets the differing conservation concepts with a special emphasis on narrative analysis as a means for describing human nature relationships and for linking conservation science to practice and to society at large Case studies illustrate the philosophical issues and help to analyse major controversies in conservation biology While the main focus is on Western ideas of conservation the book also touches upon non Western including indigenous concepts The approach taken in this book emphasises the often implicit strategic and societal dimensions of conservation concepts including power relations In finding a path through the multitude of concepts the book showcases that it is necessary to maintain the plurality of approaches in order to successfully address different situations and societal choices Overall this book highlights the very tension which conservation biology must withstand between science and society between what is possible and what we want individually or as a society or even more what is desirable Bringing some order into this multitude will support more efficient conservation and conservation biology This book will be of great interest to students and scholars studying nature conservation from a variety of disciplines including biology ecology anthropology sociology geography and philosophy It will also be of use to professionals wanting to gain an understanding of the broad spectrum of conservation concepts and approaches and when to
