## Abstract:

Personality prediction is a significant field in psychological measurement, yet it faces challenges due to psychological data's ambiguous and uncertain nature. This study aims to develop a Sugeno-based fuzzy logic system for predicting personality types according to the Myers-Briggs Type Indicator (MBTI). The dataset includes synthetic personality data, incorporating age, introversion, sensing, thinking, and judging. The fuzzification process converts crisp input values into fuzzy variables, which are then processed using predefined fuzzy rules to generate personality predictions. The defuzzification step yields crisp outputs corresponding to MBTI types, demonstrating the system's ability to handle uncertainty and ambiguity effectively. Implementation and evaluation were conducted using Python and LabVIEW, revealing a satisfactory performance with a low error rate of 0.445. This study highlights the potential of fuzzy logic, particularly the Sugeno method, in enhancing accuracy and adaptability in personality prediction, contributing to applications in education, human resource management, and personalized digital services.

## 1. Introduction

Personality prediction is a growing field of research, along with advances in information technology and machine learning. One of the most commonly used approaches in personality analysis is the Big Five personality model or Myers-Briggs Type Indicator (MBTI), which classifies individual personalities based on five main dimensions: extroversion, agreeableness, conscientiousness, openness to experience, and neuroticism [1]. These dimensions describe how individuals respond to situations and their preferences in making decisions and interacting with the environment [2]. MBTI has been widely applied in human resource management, education, and clinical psychology, demonstrating its success in understanding individuals' psychological preferences [3].

However, traditional methods such as interviews and questionnaires have limitations in capturing the complexity of a person's personality, mainly due to the nature of the data, which is often ambiguous and complex to measure objectively [4]. This uncertainty in measurement is due to differences in individual perceptions, variations in question interpretation, and the influence of external factors on responses [5], [6]. In recent years, technology-based approaches such as machine learning and natural language processing (NLP) have been used to overcome these challenges, enabling more in-depth and accurate data analysis [7], [8]. For example, digital data from social media provides a rich source of information for identifying personality patterns using machine learning algorithms [9], [10].

Machine learning-based approaches have shown great potential in improving the accuracy of personality prediction. Previous research successfully developed MBTI-based personality prediction models using text analysis from social media, resulting in higher accuracy rates than traditional methods [11], [12]. However, measuring

Helmstadter, 1964      The Chronic Crisis in Psychological Measurement and Assessment Scott T. Meier, 2013-10-22 The Chronic Crisis in Psychological Measurement and Assessment: A Historical Survey provides a historical survey of relevant concepts in psychological measurement and assessment. It does not delve into intimate details and complexities but traces measurement and assessment controversies over time and across psychological domains. The main goal has been to approach the problems of measurement and assessment from the perspective of psychological theory. The book begins with an overview, a broad picture of how psychological measurement and assessment have evolved. Separate chapters present descriptions and interpretations of measurement issues that have been important over the lifespan of psychological science. Traditional approaches along with newer concepts and procedures are discussed along with an attempt to integrate the major themes that emerge from the historical survey with the ultimate purpose of reviewing and proposing new directions. This book is offered as a complement to existing texts in psychological measurement and assessment.      Psychological Measurement and Prediction. Part I.
