**The Power of Knowledge** Jeremy Black, 2014-01-14 Information is power. For more than five hundred years the success or failure of nations has been determined by a country's ability to acquire knowledge and technical skill and transform them into strength and prosperity. Leading historian Jeremy Black approaches global history from a distinctive perspective focusing on the relationship between information and society and demonstrating how the understanding and use of information have been the primary factors in the development and character of the modern age. Black suggests that the West's ascension was a direct result of its institutions and social practices for acquiring, employing and retaining information and the technology that was ultimately produced. His cogent and well-reasoned analysis looks at cartography and the hardware of communication, armaments and sea power, mercantilism and imperialism, science and astronomy as well as bureaucracy and the management of information, linking the history of technology with the history of global power while providing important indicators for the future of our world.
