Ambivalences of Creating Life Kristin Hagen, Margret Engelhard, Georg Toepfer, 2015-08-27 Synthetic biology is the label of a new technoscientific field with many different facets and agendas One common aim is to create life primarily by using engineering principles to design and modify biological systems for human use In a wider context the topic has become

one of the big cases in the legitimization processes associated with the political agenda to solve global problems with the aid of bio technological innovation Conceptual level and meta level analyses are needed we should sort out conceptual ambiguities to agree on what we talk about and we need to spell out agendas to see the disagreements clearly The book is based on the interdisciplinary summer school Analyzing the societal dimensions of synthetic biology which took place in Berlin in September 2014 The contributions address controversial discussions around the philosophical examination public perception moral evaluation and governance of synthetic biology Religion and Transhumanism Calvin Mercer, Tracy J. Trothen, 2014-11-17 Should technology be used to improve human faculties such as cognition and longevity This thought provoking dialogue between transhumanism and religion examines enhancement technologies that could radically alter the human species Transhumanism or human enhancement is an intellectual and cultural movement that advocates the use of emerging technologies to change human traits Although they may sound like science fiction the possibilities suggested by transhumanism are very real and the questions they raise have no easy answers If these enhancements especially major ones like the indefinite extension of healthy human life become widely available they would arguably have a more radical impact on humankind than any other development in history This book comprises essays that explore transhumanism and the issues that surround it addressing numerous fascinating questions posed by scholars of religion from various traditions How will immortality or extreme longevity change our religious beliefs and practices How might pharmaceuticals enhance spiritual experiences Will post human technologies be available to all persons or will a superior post human race arise to dominate the human species The discussions are as intriguing as the future they suggest *Children's Books in Print, 2007* ,2006
