ПРЕДИСЛОВИЕ

Постоянное внимание партии и правительства к сыродельной отрасли промышленности, изготовляющей один из основных продуктов питания, позволяет непрерывно совершенствовать технологию сыров и развивать техническую базу сыроделия в стране. В результате за короткий исторический период Советский Союз вышел по производству сыров на второе место в мире.

Продовольственная программа СССР, которая занимает центральное место в планах развития страны, предусматривает и в дальнейшем ускоренное развитие сыродельной промышленности.

Сыроделие возникло, как только человек научился доить домашних животных. В оставшейся, девяностой после окончания бактерицидной фазы происходило скисание молока и ферментация составных частей его молочнокислыми микроорганизмами. Образовавшийся сгусток сжимался и отделялся от сыворотки. Слимая сыворотку, человек получал простейший сыр. Слово курт, которое использовалось, очевидно, для обозначения этого сыра, можно встретить в различных языках.

Имеются данные, позволяющие считать, что получение молока, а следовательно, и его простейшая переработка на сыр были известны человеку 6,5—5 тысячелетий до н. э. С тех пор, с каждым истекшим столетием сыры получали все большее распространение, рассматривались как один из ценнейших продуктов питания и проникали во все новые районы и уголки земного шара. До XIX в. сыроделие почти целиком зависело от местных условий. Состав кормов и порода домашних животных обусловливали свойства, биохимический и микробиологический состав молочного сыра, а климатические условия и традиции в технологии определяли, какими будут сыры, изготовленные в конкретной местности. Так появились и сохранили свои отличительные признаки сыры эмментальский, гауда, костромской, голландский круглый, степной, рокфор, эдамский, латвийский, чеддер, пармезан, сулугуни, грузинский, чанах и многие другие.

В прошлом столетии сыроделие стало терять локальный характер. Экспорт технологии вызвал прежде всего необходимость искусственного культивирования смеси молочнокислых микроорганизмов определенного состава, а также выбор молочного сырья с определенными свойствами и составом.

В XX в. появилась возможность управлять процессами получения молока с заданными биохимическими и технологическими свойствами, выращивать и контролировать специальные бактериальные закваски, осуществлять разнообразные физико-химические и биологические приемы обработки сырья, а также промежуточных продуктов. В результате появилось большое количество новых разновидностей сыров. В настоящее время ассортимент сыров, насчитывающий более 500 наименований, продолжает увеличиваться.

Повсеместное внимание потребителей к сыру можно объяснить его высокой биологической ценностью, широкой гаммой вкусовых оттенков и способностью длительно храниться. Следует отметить, что в последнее десятилетие получил научное подтверждение тот факт, что образующиеся при созревании сыра короткие цепочки из аминокислот — олигопептиды — имеют такую же биологическую активность, как витамины и гормоны.

Наряду с сыром огромной популярностью у населения пользуются творог и сырково-творожные изделия. Производство их составляет сотни тысяч тонн в можно рассматривать вместе с выпуском кисломолочных продуктов как важный социальный фактор сохранения и улучшения здоровья трудящихся страны.
