Rogers, Jere H. Lipps, George D. Stanley, Jr., 2016-07-27 In this book contributors from diverse backgrounds take a first step toward an integrated view of reefs and the significance of their recent decline More than any other earth system coral reefs sit at a disciplinary crossroads Most recently they have reached another crossroads fundamental changes in their biological physical structure greater than those of previous centuries or even millennia Effective strategies to mitigate recent trends will require an approach that embraces the myriad perspectives from across the scientific landscape but will also need a mechanism to transform scientific understanding into social will and political implementation Who Needs a Reef? Karen Patkau, 2014-09-09 Karen Patkau takes readers on an amazing voyage of discovery to find out How coral reefs form Why coral reefs bustle and teem with life Why there are more kinds of living things on coral reefs than anywhere else in the sea

Coral Bleaching Madeleine J. H. van Oppen,Janice M. Lough,2008-10-09 One of the most dire consequences of global climate change for coral reefs is the increased frequency and severity of mass coral bleaching events This volume provides information on the causes and consequences of coral bleaching for coral reef ecosystems from the level of individual colonies to ecosystems and at different spatial scales as well as a detailed analysis of how it can be detected and quantified Future scenarios based on modelling efforts and the potential mechanisms of acclimatisation and adaptation are reviewed The much more severe coral bleaching events experienced on Caribbean coral reefs compared with those of the Indo Pacific are discussed as are the differences in bleaching susceptibility and recovery that have been observed on smaller geographic scales *Latin American Coral Reefs* J. Cortés,2003-04-25 Approx 508 pages *A Research Review of Interventions to Increase the Persistence and Resilience of Coral Reefs* National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Life Sciences,Ocean Studies Board,Committee on Interventions to Increase the Resilience of Coral Reefs,2019-04-05 Coral reef declines have been recorded for all major tropical ocean basins since the 1980s averaging approximately 30 50% reductions in reef cover globally These losses are a result of numerous problems including habitat destruction pollution overfishing disease and climate change Greenhouse gas emissions and the associated increases in ocean temperature and carbon dioxide CO₂ concentrations have been implicated in increased reports of coral bleaching

disease outbreaks and ocean acidification OA For the hundreds of millions of people who depend on reefs for food or livelihoods the thousands of communities that depend on reefs for wave protection the people whose cultural practices are tied to reef resources and the many economies that depend on reefs for fisheries or tourism the health and maintenance of this major global ecosystem is crucial A growing body of research on coral physiology ecology molecular biology and responses to stress has revealed potential tools to increase coral resilience Some of this knowledge is poised to provide practical interventions in the short term whereas other discoveries are poised to facilitate research that may later open the doors to additional interventions A Research Review of Interventions to Increase the Persistence and Resilience of Coral Reefs reviews the state of science on genetic ecological and environmental interventions meant to enhance the persistence and resilience of coral reefs The complex nature of corals and their associated microbiome lends itself to a wide range of possible approaches This first report provides a summary of currently available information on the range of interventions present in the scientific literature and provides a basis for the forthcoming final report
