Reflecting Telescope Optics I:

Reflecting Telescope Optics I Raymond N. Wilson, 2013-03-09 This is the first volume of a monumental work that will provide a complete treatment of all theoretical aspects of reflecting telescope optics. It addresses all specialists in the field both within the astronomical community and in industry and consequently particular emphasis is placed on subjects such as practical alignment test techniques and maintenance aspects. Whereas the second volume will concentrate on technical aspects and modern developments, this one is devoted to the theory of reflecting telescope optics and together with the historical development it will also prove to be useful to students. This book has real classic potential. *Reflecting Telescope Optics I* Raymond N. Wilson, 2007-09-03 Complete compendium on the physics and applications of telescope optics underlying the original and oldest of astronomical instruments. Thoroughly scholarly work that provides both the historical perspective and the state of the art technology such as the 4 lens corrector of Delabre and the LADS corrector. Newly updated edition brings this authoritative work completely up to date. From the reviews, an unequalled reference for those who have interest in the field, a unique reference in a superb presentation. ESO Messenger *Reflecting Telescope Optics*, 1996

Reflecting Telescope Optics II Raymond N. Wilson, 2013-04-17 This volume is concerned essentially with the modern developments in reflecting telescope optics. In the last twenty years, modern technology has revolutionized not only manufacturing and test procedures but also the whole area of quality specification with the introduction of active control into the functioning telescope. Other subjects covered here are alignment of telescope optics, atmospheric optics including adaptive optics, reflecting coatings and ancillary equipment, adapters and baffles. Although an independent work, Vol II is heavily cross referenced with Vol I. It is richly illustrated and gives together with Vol I the most complete list of references available; it can also therefore be regarded as a source book. **Reflecting Telescope Optics**, 1996 *Reflecting*

Telescope Optics II Raymond N. Wilson, 2001-07-17 This book, written by the designer of the world's largest telescope, the VLT in Chile, covers the essential modern developments in telescope optics. In the last twenty years, modern technology has revolutionized not only manufacturing and test procedures but also the entire area of quality specification. In addition to these topics, the book also covers the alignment of telescope optics, atmospheric optics, adaptive optics, reflective coatings and ancillary equipment. Richly illustrated, this work covers important modern techniques which makes it one of the most complete references on telescope optics. *Reflecting Telescope Optics* Ray N. presents the established sciences of optical infrared and radio astronomy as distinct research areas focusing on the science targets and the constraints that they place on instrumentation in the different domains It aims to bridge the gap between specialized books and practical texts presenting the state of the art in different techniques For each type of astronomy the discussion proceeds from the orders of magnitude for observable quantities that drive the building of instrumentation and the development of advanced techniques The specific telescopes and detectors are then presented together with the techniques used to measure fluxes and spectra Finally the instruments and their limits are discussed to assist readers in choice of setup planning and execution of observations and data reduction The volume also includes worked examples and problem sets to improve student understanding tables and figures in chapters summarize the state of the art of instrumentation and techniques

Integrated Modeling of Telescopes Torben Andersen, Anita Enmark, 2011-06-23

Ground or space based telescopes are becoming increasingly more complex and construction budgets are typically in the billion dollar range Facing costs of this magnitude availability of engineering tools for prediction of performance and design optimization is imperative Establishment of simulation models combining different technical disciplines such as Structural Dynamics Control Engineering Optics and Thermal Engineering is indispensable Such models are normally called Integrated Models because they involve many different disciplines The models will play an increasingly larger role for design of future interdisciplinary optical systems in space or on ground The book concentrates on integrated modeling of optical and radio telescopes but the techniques presented will be applicable to a large variety of systems Hence the book will be of interest to optical and radio telescope designers designers of spacecrafts that include optical systems and to designers of various complex defense systems The book may also find use as a textbook for undergraduate and graduate courses within the field Adaptive Optics is an exciting and relatively new field originally dedicated to correction for blurring when imaging through the atmosphere Although this objective is still of high importance the concept of Adaptive Optics has recently evolved further Today the objective is not only to correct for atmospheric turbulence effects but also for a range of static and dynamical telescope aberrations The notion of adaptive optics has expanded to the field of Wavefront Control correcting for a variety of system aberrations Wavefront control systems maintain form and position of optical elements with high precision under static and dynamical load In many ways such systems replace the steel structures of traditional optical systems thereby providing much lighter systems with a performance not possible before Integrated Modeling is the foremost tool for studies of Wavefront Control for telescopes and complex optics and is therefore now of high importance Springer has recently published two books on telescopes Reflecting Telescope Optics by R Wilson and The Design and Construction of Large Optical Telescopes by P Bely Noting that a new and expensive generation of Extremely Large Telescopes with apertures in the 30 100 m range is on the way the present book on integrated modeling is a good match to the existing books and an appropriate specialization and continuation of some subjects dealt with in those books

Observational Astrophysics

Pierre Léna, Daniel Rouan, François Lebrun, François Mignard, Didier Pelat, 2012-01-13 This is the updated widely revised restructured and expanded third edition of L na et al s successful work *Observational Astrophysics* It presents a synthesis on tools and methods of observational astrophysics of the early 21st century Written specifically for astrophysicists and graduate students this textbook focuses on fundamental and sometimes practical limitations on the ultimate performance that an astronomical system may reach rather than presenting particular systems in detail In little more than a decade there has been extraordinary progress in imaging and detection technologies in the fields of adaptive optics optical interferometry in the sub millimetre waveband observation of neutrinos discovery of exoplanets to name but a few examples The work deals with ground based and space based astronomy and their respective fields And it also presents the ambitious concepts behind space missions aimed for the next decades Avoiding particulars it covers the whole of the electromagnetic spectrum and provides an introduction to the new forms of astronomy becoming possible with gravitational waves and neutrinos It also treats numerical aspects of observational astrophysics signal processing astronomical databases and virtual observatories
