certain psychological drives dormant in our shared unconscious these are the archetypes From the omnipotent god to the  
idea of the nation state the formulation of most of these archetypes is owed to ancient Egypt Michael Rice sets out to recover  
the sense of wonder that the Egyptians themselves felt as they contemplated the world in which they lived and the way they  
expressed that wonder in the religion art and literature He traces the story of Egyptian civilization from its emergence in the

*On the Process of Civilisation in Japan* Wai Lau,2022-11-03 Winner of the Norbert Elias Book Prize 2023 This book charts the process of civilisation in Japan Using the theory of civilising processes developed by Norbert Elias the author examines the complex underlying structural and psychological processes from the seventh century to the twentieth century Furthermore by drawing on rich historical data the author illustrates how these complex processes led the Japanese to see themselves as more civilised than their forebears and neighbouring countries Although the theory serves as an important reference point the author draws on other works to address different complex questions surrounding Japanese development Therefore this book presents three key themes first it gives an alternative understanding of the complex developments of Japanese society second it intercedes into an ongoing debate about the applicability of Elias s theory in a non Western context and third it expands Elias s theory     *The Intellectual Properties of Learning* John Willinsky,2018-01-02 Providing a sweeping millennium plus history of the learned book in the West John Willinsky puts current debates over intellectual property into context asking what it is about learning that helped to create the concept even as it gave the products of knowledge a different legal and economic standing than other sorts of property Willinsky begins with Saint Jerome in the fifth century then traces the evolution of reading writing and editing practices in monasteries schools universities and among independent scholars through the medieval period and into the Renaissance He delves into the influx of Islamic learning and the rediscovery of classical texts the dissolution of the monasteries and the founding of the Bodleian Library before finally arriving at John Locke whose influential lobbying helped bring about the first copyright law the Statute of Anne of 1710

Willinsky's bravura tour through this history shows that learning gave rise to our idea of intellectual property while remaining distinct from if not wholly uncompromised by the commercial economy that this concept inspired making it clear that today's push for marketable intellectual property threatens the very nature of the quest for learning on which it rests

**Japan** Conrad Totman, 2014-01-30 From the outset society in Japan has been shaped by its environmental context The lush green mountainous archipelago of today with its highly productive lowlands supports a population of more than 127 million people and one of the most advanced economies in the world How has this come about and at what environmental cost Conrad Totman one of the world's foremost scholars on Japanese here provides a comprehensive and detailed account of the country's environmental history from its beginnings to the present day Professor Totman traces the country's development through successive historical phases as early agricultural society based on non intensive forms of cultivation gave way to more intensified forms With each stage came greater utilisation of natural resources but a steady reduction in the richness of the indigenous biosystem By the late seventeenth century the country was well on the way to ecological disaster Yet Japan's isolation in the seventeenth and eighteenth centuries led to an unusually enlightened set of environmental policies and the system of regenerative forestry brought in during the Tokugawa period prevented certain devastation of the country's forests At the end of the nineteenth century however the country began to go to the opposite extreme as industrialisation brought with it a period of unprecedented change Growth and diversification led to a surge in environmental pollution as it became necessary to look beyond the country's domestic natural resources to meet the demand for foodstuffs fossil fuels and the raw materials necessary to an advanced industrial economy The population was particularly badly affected and some of the problems that emerged especially from the 1960s onwards provided important test cases not just for Japan but worldwide What makes the Japanese story particularly instructive is that the country's boundaries are uncommonly clear and the nature timing and extent of external influences on its history are unusually identifiable The Japanese experience therefore not only yields important insights into the processes of environmental history it offers important lessons for the wider environmental history of the planet and for our understanding of current global ecological problems A work of immense erudition and reflecting a lifetime of scholarship Japan an Environmental History will be welcomed by all with an interest in environmental history and the historical development of Japan
