Disaster Medicine Jan de Boer,Marcel Dubouloz,2020-04-28 Technological development has not only provided mankind with more prosperity but with increased destructive power as well These developments combined with an explosive growth of the world population have led to mass casualty situations varying from traffic accidents to war In the 20th Century over 200 million people were killed as a result of man made disasters a figure unequalled in the history of mankind It is not surprising therefore that a new medical discipline has emerged disaster medicine The realization that disasters have effects which cross the traditional boundaries of medical specialisms and nationality led to the foundation of the International Society of Disaster Medicine ISDM which issued an international curriculum on education and training in disaster medicine As a logical consequence the ISDM decided to develop its curriculum into a handbook now available to the global community of disaster medicine specialists This Handbook of Disaster Medicine contains contributions from international experts in the field and will be of value and interest to a wide variety of professionals in the discipline of disaster medicine and management

Mass Refugee Influx and the Limits of Public International Law Ann Vibeke Eggli, 2021-11-15 Situations of mass refugee influx represent by their very size and urgency daunting evidence of human suffering and cruelty Consequently the level and quality of refugee protection in times of crisis is tested The choices to be made have to take into due consideration the prevalent conditions and restraints They will probably always result in compromises The question is whom or what the compromises are about The focus in the present volume has been set on a detailed examination of some legal preconceptions commonly found in situations of mass refugee in migration The author concludes that situations when refugees arrive en masse do not as a rule qualify as a public emergency that threatens the life of the nation under contemporary international human rights law and that mass expulsion of refugees as an emergency measure is prohibited at all times when this entails the risk of violating rights immune to derogation

Machel Study 10-year Strategic Review, 2009 The organisation of this report aims to heighten our understanding of the myriad ways in which armed conflict affects children and how children regard their participation not only in war but in programmes aimed at preventing violence against them and in promoting their recovery and reintegration The central message of this 10 year strategic review is that war violates every right of the child The report thus frames its findings within three categories political and diplomatic actions and responsibilities system wide international policies standards and architectures and prevention and response

The Health of Refugees Pascale Allotey, Daniel Reidpath, 2019-01-03 At the moment over 65

million people are forcibly displaced from their homes. The reasons for movement range from extreme weather conditions and environmental disasters to war, civil and political crises to the need for basic economic survival. Amongst these 65 million people are those that have been forced to leave a country that is no longer willing or able to offer protection and those who are displaced within their own country's borders. In order to improve conditions for displaced people all over the globe we need to look at the reason behind their move as this defines their migration status under international law. In its turn the migration status affects the requirements of other countries to grant asylum and the individual's right to protection and support. The definition of migration status and its implications has created tension in the public debate on refugees for decades and is today more relevant than ever. In *The Health of Refugees: Public Health Perspectives from Crisis to Settlement* the challenges and vulnerabilities created from this debate are addressed by public health policy makers, clinical practitioners and researchers. An analysis of public health, international law, the history of migration and the media's role in refugee health, it is a comprehensive and critical work with a strong message in favour of international and interdisciplinary cooperation. With a focus on what international obligations entail when it comes to refugees and migrants, the authors present a reinforced take on our collective responsibility to leave no one behind. *The Health of Refugees: Public Health Perspectives from Crisis to Settlement* traces the health repercussions on individuals and populations from the moment of forced mass movement due to conflict and other disasters through to the process of resettlement in other countries. These issues are addressed within the context of other global public health priorities and are part of the book's critical analysis not only of the particular vulnerabilities created by mobility but also how these interact and intersect with existing considerations across gender and age in health systems and international law. With a wider geographical area and case studies from all over the globe as a basis for the studies presented, this is a fully updated edition with new material discussing the current political landscape. A truly multidisciplinary book, *The Health of Refugees* is ideal for public health practitioners, researchers and postgraduate students. It is also an important work for those involved in non-governmental organisations, international aid and international development. Furthermore, it provides a critical background for clinicians, mental health workers and policymakers from health, welfare and migration.

For many of those involved it may be their first encounter. This book, which is the first to address the preparation and operation of field hospitals, brings together the experience of world leaders in the field. Coming from a wide variety of organizations and backgrounds, all have extensive experience in field hospital deployment in multiple scenarios. The text, containing both background information and practical guidelines, will serve all those involved in field hospital deployment, including policy makers and planners, physicians

and nurses paramedical professionals and logisticians It will help them deliver optimal care to people around the globe in difficult times of need **Disaster and Development** Andrew E. Collins,2009-09-10 Development to a large extent determines the way in which hazards impact on people Meanwhile the occurrence of disasters alters the scope of development Whilst a notion of the association of disaster and development is as old as development studies itself recent decades have produced an intensifying demand for a fuller understanding Evidence of disaster and development progressing together has attracted increased institutional attention This includes recognition through global accords of a need for disaster reduction in achieving Millennium Development Goals and of sustainable development as central to disaster reduction However varied interpretations of this linkage and accessible options for future human wellbeing remain unconsolidated for most of humanity This engaging and accessible text illuminates the complexity of the relationship between disaster and development It opens with an assessment of the scope of contemporary disaster and development studies highlighting the rationale for looking at the two issues as part of the same topic The second and third chapters detail development perspectives of disaster and the influence of disaster on development The fourth chapter exemplifies how human health is both a cause and consequence of disaster and development and the following chapter illustrates some of the learning and planning processes in disaster and development oriented practice Early warning risk management mitigation response and recovery actions provide the focus for the fifth and sixth chapters The final chapter indicates some of the likely future contribution and challenges of combined disaster and development approaches With an emphasis on putting people at the centre of disaster and development the book avoids confronting readers with no hope representations instead highlighting disaster reduction opportunities This book is an essential introduction for students from multiple disciplines whose subject area may variously engage with contemporary crises and for many other people interested in finding about what is really meant by disaster reduction They include students and practitioners of development environment sociology economics public health anthropology and emergency planning amongst others It provides an entry point to a critical yet diverse topic backed up by student friendly features such as boxed case studies from the geographical areas of America to Africa and parts of Europe to parts of the East summaries discussion questions suggested further reading and web site information Koenig and Schultz's Disaster Medicine Kristi L. and the Sphere Project the book traces the concept of needs from its emergence in the 1960s right through to the present day and United Nations Secretary General Ban Ki moon s call for evidence based humanitarianism Finally the book assesses how the international governmentality of needs has played out in a recent humanitarian crisis drawing on field research on Central African refugees in the Cameroonian borderland in 2014 2016 This important historical inquiry into the universal nature of human suffering will be an important read for humanitarian researchers and practitioners as well as readers with an interest in international history and development
