have contributed a steady stream of magnitude estimates of the brightest and closest supernovae In addition with the increasing availability of robotic telescopes and CCD technology more and more amateurs are discovering supernovae from their backyards Worldwide there have been more than 400 supernovae discovered by amateur astronomers using amateur telescopes Supernova research has never been so important Recent professional measurements of the most distant Type Ia supernovae have revealed the staggering and unexpected discovery that the acceleration of the Universe is actually increasing This in turn has led to a new phrase dark energy entering the astronomical vocabulary a mysterious force in opposition to gravity driving the accelerated expansion Although amateurs cannot study the farthest supernovae their discovery and measurement of the closer examples helps to refine the science that is the hottest topic in cosmology today that is pinning down the history of the Universe and how much mass and energy exists within it today As always amateur astronomers are making a valuable contribution and hopefully this book might inspire a few more to monitor and discover new supernovae
