Shintani Zeta Functions:

    Shintani Zeta Functions Akihiko Yukie,1994 This is amongst the first books on the theory of prehomogeneous vector spaces and represents the author s deep study of the subject **On the global theory of Shintani zeta functions** Akihiko Yukie,1991 On the global theory of Shintani zeta functions Akihiko Yukie,1991 On the Global Theory of Shintani Zeta Functions A. Yukie,1991 The Theory of Zeta-Functions of Root Systems Yasushi Komori,Kohji Matsumoto,Hirofumi Tsumura,2024-01-02 The contents of this book was created by the authors as a simultaneous generalization of Witten zeta functions Mordell Tornheim multiple zeta functions and Euler Zagier multiple zeta functions Zeta functions of root systems are defined by certain multiple series given in terms of root systems Therefore they intrinsically have the action of associated Weyl groups The exposition begins with a brief introduction to the theory of Lie algebras and root systems and then provides the definition of zeta functions of root systems explicit examples associated with various simple Lie algebras meromorphic continuation and recursive analytic structure described by Dynkin diagrams special values at integer points functional relations and the background given by the action of Weyl groups In particular an explicit form of Witten s volume formula is provided It is shown that various relations among special values of Euler Zagier multiple zeta functions which usually are called multiple zeta values MZVs and are quite important in connection with Zagier s conjecture are just special cases of various functional relations among zeta functions of root systems The authors further provide other applications to the theory of MZVs and also introduce generalizations with Dirichlet characters and with certain congruence conditions The book concludes with a brief description of other relevant topics **Elementary Theory of L-functions and Eisenstein Series** Haruzo Hida,1993-02-11 The theory of p adic and classic modular forms and the study of arithmetic and p adic L functions has proved to be a fruitful area of mathematics over the last decade Professor Hida has given courses on these topics in the USA Japan and in France and in this book provides the reader with an elementary but detailed insight into the theory of L functions The presentation is self contained and concise and the subject is approached using only basic tools from complex analysis and cohomology theory Graduate students wishing to know more about L functions will find that this book offers a unique introduction to this fascinating branch of mathematics **Contributions to the Theory of Zeta-Functions** Shigeru Kanemitsu,Haruo Tsukada,2014-12-15 This volume provides a systematic survey of almost all the equivalent assertions to the functional equations zeta symmetry which zeta functions satisfy thus streamlining previously published results on zeta functions The equivalent relations are given in the form of modular relations in Fox H function series which at present include all that have been considered as candidates for ingredients of a series The results are presented in a clear and simple manner for readers to readily apply without much knowledge of zeta functions This volume aims to keep a record of the 150 year old heritage starting from Riemann on zeta functions which are ubiquitous in all mathematical sciences wherever there is a notion of the norm It provides almost all possible equivalent relations to the zeta functions without requiring a reader s

deep knowledge on their definitions This can be an ideal reference book for those studying zeta functions **Shintani's Method** ,2015 This construction allows us to write Dedekind zeta functions and partial zeta functions in terms of certain analytic zeta functions defined over polyhedral cones Shintani zeta functions Thus we are able to translate questions about special values of Dedekind zeta functions to those about special values of Shintani zeta whose values at non positive integers are given by closed finite expressions due to work of Shintani **Combinatorial Number Theory** Bruce Landman,Melvyn B. Nathanson,Jaroslav Nešetril,Richard J. Nowakowski,Carl Pomerance,Aaron Robertson,2013-08-29 This volume contains selected refereed papers based on lectures presented at the Integers Conference 2011 an international conference in combinatorial number theory that was held in Carrollton Georgia United States in October 2011 This was the fifth Integers Conference held bi annually since 2003 It featured plenary lectures presented by Ken Ono Carla Savage Laszlo Szekely Frank Thorne and Julia Wolf along with sixty other research talks This volume consists of ten refereed articles which are expanded and revised versions of talks presented at the conference They represent a broad range of topics in the areas of number theory and combinatorics including multiplicative number theory additive number theory game theory Ramsey theory enumerative combinatorics elementary number theory the theory of partitions and integer sequences Introduction to Prehomogeneous Vector Spaces Tatsuo Kimura,2003 This is the first introductory book on the theory of prehomogeneous vector spaces introduced in the 1970s by Mikio Sato The author was an early and important developer of the theory and continues to be active in the field The subject combines elements of several areas of mathematics such as algebraic geometry Lie groups analysis number theory and invariant theory An important objective is to create applications to number theory For example one of the key topics is that of zeta functions attached to prehomogeneous vector spaces these are generalizations of the Riemann zeta function a cornerstone of analytic number theory Prehomogeneous vector spaces are also of use in representation theory algebraic geometry and invariant theory This book explains the basic concepts of prehomogeneous vector spaces the fundamental theorem the zeta functions associated with prehomogeneous vector spaces and a classification theory of irreducible prehomogeneous vector spaces It strives and to a large extent succeeds in making this content which is by its nature fairly technical self contained and accessible The first section of the book Overview of the theory and contents of this book Is particularly noteworthy as an excellent introduction to the subject *On the Geometric Side of the Arthur Trace Formula for the Symplectic Group of Rank 2* Werner Hoffmann,Satoshi Wakatsuki,2018-10-03 The authors study the non semisimple terms in the geometric side of the Arthur trace formula for the split symplectic similitude group and the split symplectic group of rank over any algebraic number field In particular they express the global coefficients of unipotent orbital integrals in terms of Dedekind zeta functions Hecke functions and the Shintani zeta function for the space of binary quadratic forms **Families of Automorphic Forms and the Trace Formula** Werner Müller,Sug Woo Shin,Nicolas Templier,2016-09-20 Featuring the work of twenty three internationally recognized experts this volume explores the trace

formula spectra of locally symmetric spaces p adic families and other recent techniques from harmonic analysis and representation theory Each peer reviewed submission in this volume based on the Simons Foundation symposium on families of automorphic forms and the trace formula held in Puerto Rico in January February 2014 is the product of intensive research collaboration by the participants over the course of the seven day workshop The goal of each session in the symposium was to bring together researchers with diverse specialties in order to identify key difficulties as well as fruitful approaches being explored in the field The respective themes were counting cohomological forms p adic trace formulas Hecke fields slopes of modular forms and orbital integrals   **Differential Geometry: Geometry in Mathematical Physics and Related Topics** Robert Everist Greene,Shing-Tung Yau,1993 The second of three parts comprising Volume 54 the proceedings of the Summer Research Institute on Differential Geometry held at the University of California Los Angeles July 1990 ISBN for the set is 0 8218 1493 1 Among the subjects of Part 2 are gauge theory symplectic geometry complex ge   **History of Zeta Functions** Robert Spira,1999   Automorphic Forms and Geometry of Arithmetic Varieties K. Hashimoto,Y. Namikawa,2014-07-14 Automorphic Forms and Geometry of Arithmetic Varieties deals with the dimension formulas of various automorphic forms and the geometry of arithmetic varieties The relation between two fundamental methods of obtaining dimension formulas for cusp forms the Selberg trace formula and the index theorem Riemann Roch s theorem and the Lefschetz fixed point formula is examined Comprised of 18 sections this volume begins by discussing zeta functions associated with cones and their special values followed by an analysis of cusps on Hilbert modular varieties and values of L functions The reader is then introduced to the dimension formula of Siegel modular forms the graded rings of modular forms in several variables and Selberg Ihara s zeta function for p adic discrete groups Subsequent chapters focus on zeta functions of finite graphs and representations of p adic groups invariants and Hodge cycles T complexes and Ogata s zeta zero values and the structure of the icosahedral modular group This book will be a useful resource for mathematicians and students of mathematics   **Automorphic Forms, Automorphic Representations, and Arithmetic** Robert S. Doran,1999   **Multiple Dirichlet Series, L-functions and Automorphic Forms** Daniel Bump,Solomon Friedberg,Dorian Goldfeld,2012-07-09 Multiple Dirichlet Series L functions and Automorphic Forms gives the latest advances in the rapidly developing subject of Multiple Dirichlet Series an area with origins in the theory of automorphic forms that exhibits surprising and deep connections to crystal graphs and mathematical physics As such it represents a new way in which areas including number theory combinatorics statistical mechanics and quantum groups are seen to fit together The volume also includes papers on automorphic forms and L functions and related number theoretic topics This volume will be a valuable resource for graduate students and researchers in number theory combinatorics representation theory mathematical physics and special functions Contributors J Beineke B Brubaker D Bump G Chinta G Cornelissen C A Diaconu S Frechette S Friedberg P Garrett D Goldfeld P E Gunnells B Heim J Hundley D Ivanov Y Komori A V Kontorovich O Lorscheid K Matsumoto P J McNamara S J Patterson M Suzuki H

Tsumura	Geometric Aspects of the Trace Formula Werner Müller,Sug Woo Shin,Nicolas Templier,2018-10-11 The second of three volumes devoted to the study of the trace formula these proceedings focus on automorphic representations of higher rank groups Based on research presented at the 2016 Simons Symposium on Geometric Aspects of the Trace Formula that took place in Schloss Elmau Germany the volume contains both original research articles and articles that synthesize current knowledge and future directions in the field The articles discuss topics such as the classification problem of representations of reductive groups the structure of Langlands and Arthur packets interactions with geometric representation theory and conjectures on the global automorphic spectrum Suitable for both graduate students and researchers this volume presents the latest research in the field Readers of the first volume Families of Automorphic Forms and the Trace Formula will find this a natural continuation of the study of the trace formula	Novikov Conjectures, Index Theorems, and Rigidity: Volume 1 Steven C. Ferry,Andrew Ranicki,Jonathan M. Rosenberg,London Mathematical Society,1995-11-23 The Novikov Conjecture is the single most important unsolved problem in the topology of high dimensional non simply connected manifolds These volumes are the outgrowth of a conference held at the MathematischesForschungsinstitut Oberwolfach Germany in September 1993 on the subject of Novikov conjectures index theorems and rigidity	Ergodic Theory and Zd Actions Mark Pollicott,Klaus Schmidt,1996-03-28 A mixture of surveys and original articles that span the theory of Zd actions
