## Short Dialysis:

**Short Dialysis** Andrea Cambi, 2012-12-06 Vittorio E Andreucci of keeping alive patients in terminal chronic Initially created with the purpose renal failure dialysis has undergone improvements in methodology and its final goal has become complete health rehabilitation and optimization of the quality of life of chronic dialysis patients To achieve this many investigators have attempted to increase dialysis efficiency and at the same time shorten dialysis time Their main concern was obviously patient safety the Latin proverb *primum non nocere* is still valid all over the world Thus when clinical observations of the first patients on regular dialysis therapy suggested an inverse relationship between duration of dialysis sessions and severity of peripheral neuropathy long and frequent dialysis sessions were considered the only way to prevent the catastrophic consequences of nerve damage and underdialysis syndrome It was then in 1971 when dialysis duration was 8 12 hours per session that Vincenzo Cambi started a short dialysis trial i e 4 hours 3 times weekly or 3 hours every second day For the first time dialysis was shortened from 24 36 hours weekly to 10 5 12 hours weekly 1 2 In 1971 I was still at the Parma University Hospital We had both just returned from the United States and Dr Cambi was responsible for the dialysis unit

**Daily and Nocturnal Hemodialysis** Robert M. Lindsay,2004-01-01 As the frequency of hemodialysis sessions has always been a concern it is not astonishing that interest in quotidian daily hemodialysis appears to be growing worldwide The main reasons for more frequent dialysis are to maximize well being and minimize both intra and interdialytic symptoms as well as to improve the treatment of patients with severe underlying medical problems particularly cardiovascular disease Moreover studies also indicate overall potential cost savings as compared with current conventional hemodialysis There are two options available namely short daily and long nightly treatments The main difference centers on the ability of the nightly regimen to remove greater amounts of phosphate and beta 2 microglobulin Even so there is no doubt that both treatments are highly preferable to conventional three times weekly dialysis Further issues which are discussed include the requirements necessary to run dialysis programs vascular access requirements and the management of complications and risks such as calcium and phosphorus control This is the first publication devoted solely to daily hemodialysis therapies Concentrating on clinical and technical issues it is an important contribution to the practical development of daily hemodialysis and is highly recommended to nephrologists nurses managers of renal programs and others involved in renal care
