 in 1995 The problem of disparities between different estimates of GDP is well known and widely discussed Here the authors
 describe a method for examining the discrepancies using a technique allocating them with reference to data reliability The
 method enhances the reliability of the underlying data and leads to maximum likelihood estimates It is illustrated by
 application to the UK national accounts for the period 1920 1990 The book includes a full set of estimates for this period
 including runs of industrial data for the period 1948 1990 which are longer than those available from any other source The
 statistical technique allows estimates of standard errors of the data to be calculated and verified these are presented both for
 data in levels and for changes in variables over 1 2 and 5 year periods **Statistics Canada Catalogue** Statistics
