Gaithersburg, MD 20899

The National Computer Systems Laboratory (NCSL) of the National Institute of Standards and Technology (NIST) and the National Computer Security Center (NCSC) of the Department of Defense (DoD) co-sponsored the Twelfth National Computer Security Conference held in Baltimore, Maryland on October 10-13, 1989. The theme of the conference, "Information Systems Security: Solutions for Today—Concepts for Tomorrow," highlighted the broader focus of information systems security which now challenges the user community, vendors, system developers, and administrators. Major areas addressed included advanced research developments and emerging technologies, network security architectures, risk management, management and administration issues in computer security, and an expanded focus on education and ethics. More than 2,000 attendees from government, industry, and academia participated in the 4-day conference, which was co-chaired by NCSL's Irene Gilbert and NCSC's George Mitchell.

1. History of the Conference

The National Computer Systems Laboratory has played a vital role in protecting the security and integrity of information in government computer systems through its Computer Security Program since the passage of the Brooks Act in 1965. Since 1972, the Laboratory has issued standards and guidelines on the cost-effective protection of unclassified information in computer systems. NCSL works with organizations from government, industry, academia, and voluntary standards groups to develop standards and guidance, produce tests to evaluate conformance to standards, transfer technology to users, and provide technical assistance to government and industry in computer security applications. The Computer Security Act of 1987 strengthened NCSL's role in protecting unclassified sensitive information in federal computer systems.

The Department of Defense also has pursued an active computer security program over many years. In 1978, the Assistant Secretary of Defense for Communications, Command, Control and Intelligence established a Computer Security Initiative to ensure the widespread availability of trusted ADP systems within the DoD community. In 1981, the National Computer Security Center was created to administer the activities of the initiative. NCSC advances the development of trusted computer systems and publishes guidelines on computer security. In response to the increased emphasis on computer security in recent years, NCSC expanded its efforts to support basic research for the development of additional trusted systems. NCSC's technology transfer program ensures that other federal agencies and industry benefit from technological advances in computer security.
