Terpstra,1982 Petroleum and Public Safety James B. McSwain,2018-07-06 Throughout the twentieth century cities such as Houston Galveston New Orleans and Mobile grappled with the safety hazards created by oil and gas industries as well as the role municipal governments should play in protecting the public from these threats James B McSwain s *Petroleum and Public Safety* reveals how officials in these cities created standards based on technical scientific and

engineering knowledge to devise politically workable ordinances related to the storage and handling of fuel. Each of the cities studied in this volume struggled through protracted debates regarding the regulation of crude petroleum and fuel oil sparked by the famous Spindletop strike of 1901 and the regional oil boom in the decades that followed. Municipal governments sought to ensure the safety of their citizens while still reaping lucrative economic benefits from local petroleum industry activities. Drawing on historical antecedents such as fire protection engineering, the cities of the Gulf South came to adopt voluntary consensual fire codes issued by insurance associations and standards organizations such as the National Board of Fire Underwriters, the National Fire Protection Association, and the Southern Standard Building Code Conference. The culmination of such efforts was the creation of the International Fire Code, an overarching fire protection guide that is widely used in the United States, Mexico, the Caribbean, and Central America. In devising ordinances, Gulf South officials pursued the politics of risk management as they hammered out strategies to eliminate or mitigate the dangers associated with petroleum industries and to reduce the possible consequences of catastrophic oil explosions and fires. Using an array of original sources including newspapers, municipal records, fire insurance documents, and risk management literature, McSwain demonstrates that Gulf South cities played a vital role in twentieth-century modernization.

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10. Over the last three decades, the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha, to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could without exaggeration be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all-encompassing reference. Instead, Frank Lees' world-renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field. Sam Mannan is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data, and references needed by those practicing in the field. *Subject Guide to Books in Print*, 1983. *Current Catalog*, National Library of Medicine (U.S.), First multi-year cumulation covers six years 1965-70.
