Snellen,W.B.H.J. van de Donk,1998-12-31 This book is a joint effort of researchers who have been involved in research projects and programmes that have been trying to chart and reflect upon the implications of Information and Communication Technologies ICTs for Public Administration Since the 1950s computers had largely facilitated and the transformation of the minimal Night Watch state into the modern Welfare state through their contribution to their effectivity productivity and efficiency In most Handbooks of Public Administration computers are seen as neutral instruments and most of the time the role of computer technologies in the transformation of public administration is completely neglected This deafening silence is a great contrast with the way ICT s are actually changing public administration The faster the developments in a field of study are the more difficult it is to let the theories related to that field of study mature In such circumstances most statements will remain provisial and context dependent 25 years of research in Irvine California and Kassel Germany and more than 10 years of research in Tilburg Rotterdam The Netherlands and about seven years of research in Glasgow Nottingham the United Kingdom nonetheless enables the presentation of a modest image of public administration as it is entering the information age Researchers in each of these groups have nevertheless not stopped trying to phrase theories about the implications of informatization for public administration with a more or less larges scope that are robust in different contexts and over longer periods of time These results and theories covering a broad set of elements of the body of knowledge of public administration are presented in this volume As the authors try to demonstrate in this book informatization developments in public administration do not only challenge the existing body of knowledge of the public administration discipline but they are also opening up new perspectives and paradigms for the study of public administration

Computers and Informatics in Developing Countries Mohan Munasinghe, 2014-05-20 Computers and Informatics in Developing Countries is a collection of papers documenting the conference of the Expert Group on Computers and Informatics for Development which investigates how the international scientific and development community can assist developing countries in using computer and informatics technology to promote progress and growth. The papers address the need for developing countries to formulate and apply computer and informatics policies for development as well as the role of an International Centre for Computers and Informatics (ICCI) should play in the development process. The ICCI should be based on the network principle that links other regional and national computer centers. The advantages of the network principle are lower startup costs, avoidance of setting up a large organization, and localized services of needs. An international organization similar to ICCI can accelerate Third World developmental efforts following the identification of needs of developing countries as regards computer and informatics, setting of clear objectives of ICCI, and meeting with potential donors. The collection is suitable for heads of both non-government agencies and government departments involved in international aid, education, or development, and also to administrators of educational institutions and philanthropic organizations.

India's Cybersecurity Policy Thangjam K. Singh, 2024-06-07 This book examines India's public policies on cybersecurity and their evolution over the past few decades. It shows how threats and vulnerabilities in the domain have forced nation states to introduce new policies to protect digital ecosystems. It charts the process of securitisation of cyberspace by the international system from the end of the 20th century to the present day. It also explores how the domain has become of strategic interest for many states and the international bodies which eventually developed norms and policies to secure the domain. Consequently, the book discusses the evolution of cybersecurity policy at global level by great powers, middle powers, and states of concern, and compares them with the Indian context. It also highlights the requirement of introducing/improving new cybersecurity guidelines to efficiently deal with emerging technologies such as 5G, Artificial Intelligence, AI, Big Data, BD, Blockchain, Internet of Things (IoT), and cryptocurrency. The book will be of great interest to scholars and researchers of cybersecurity, public policy, politics, and South Asian studies.
