Science and Native American Communities Keith James, 2001-01-01 Education among American Indians has lagged behind that of almost all other groups in both the United States and Canada and it generally has not offered what Indian communities need It is this disturbing state of affairs along with the intractable realities unexamined assumptions and cultural conflicts and misunderstandings behind it that Science and Native American Communities confronts Representing an unprecedented gathering of Native American professionals working in the sciences and advanced technology the book combines theory and practice firsthand experience and strategic thinking in a provocative exploration of the uneasy meeting ground between science and Native American communities In highly personal deeply informed and frequently moving essays the authors wrestle with a legacy of mistrust and violence They ask Is a common ground between science and Native America possible The problems and prospects that emerge from such a meeting and that these essays address include the impact of science and technology on Native lands and environment economic and technological opportunities and challenges for reservation communities and the differences and similarities between Native and scientific thought and practice The authors not only showcase different reactions to the consequences of science but also energetically propose strategies for renegotiating Native communities relationships with science seizing control of their destinies and moving forward in the twenty first century

Patronage, Practice, and the Culture of American Science Hugh Richard Slotten, 1994-06-24 In this book Hugh Richard Slotten explores the institutional and cultural history of science in the United States The main focus is on the activities of Alexander Dallas Bache great grandson of Benjamin Franklin and the acknowledged chief of the American scientific community during the second third of the nineteenth century Bache played a central role in the organization and management of a number of key scientific institutions including the American Association for the Advancement of Science the Smithsonian Institution and the National Academy of Sciences But his dominance in these institutions was made possible through his control of an organization less well known today the United States Coast Survey which he superintended from 1843 until his death in 1867 Under Bache's command the Coast Survey became the central scientific institution in antebellum America Using richly detailed archival records Slotten pursues an analysis of Bache and the Coast Survey that illuminates important historiographic themes We gain a better understanding of the particular style of nineteenth century American science by examining the role of the Coast Survey as a source of patronage Perhaps most

important this study explores the ways in which scientific knowledge and practice are embedded within local contexts Although Bache sought to use the Coast Survey to raise the status of American science partly by emulating European scientific elites his efforts also reflected the cultural and political values of antebellum America Sloten thus analyzes the interrelationship between political culture patterns of patronage and the institutional practice of science in the United States
