**Classification of the Natural Communities of North Carolina** Michael P Schafale, 2024-06 The North Carolina Natural Heritage Program's Classification of the Natural Communities now in its fourth edition is intended as a reference book describing the state's biodiversity at the community and ecosystem levels It describes natural patterns of organisms that typically co occur together in a particular kind of environment The classification draws on years of use and data collection by North Carolina's Natural Heritage Program the extensive vegetation plot data of the Carolina Vegetation Survey and the National Vegetation Classification The classification units are intended for detailed conservation planning at the natural community level for representing the diversity of ecological function for characterizing the habitats of species and for contributing to the conservation of the myriad species that are too poorly known to track individually The 343 community subtypes are grouped into types and are nested within 30 broader ecological themes that have been recognized in North Carolina for decades retaining continuity with previous editions Material to aid in identification of the communities includes concept statements dichotomous keys and descriptions of the distinctions from closely related communities Extensive descriptions of each community and each theme include sections on physical settings soils hydrology vegetation range abundance and ecological

dynamics using scientific nomenclature and terminology Crosswalks to the National Vegetation Classification and to NatureServe s ecological systems and listings of rare plant and animal species associated with each community provide additional functionality While technical in style mostly providing scientific names instead of common names this book can offer the educated layperson and scientist alike an expanded appreciation of the diversity of natural settings in North Carolina It is expected to remain a primary reference for years to come An electronic pdf version of this book is available for download from the North Carolina Natural Heritage Program at <https://www.ncnhp.org>      Stage 2 Environmental Impact Report ,1992      *Los Vaqueros Water Supply Project, Stage 2, Contra Costa County* ,1993      Preliminary Descriptions of the Terrestrial Natural Communities of California Robert F. Nature's Sublime Robert S. Corrington, 2013-03-14 Nature's Sublime uses a radical new form of phenomenology to probe into the deepest traits of the human process in its individual social religious and aesthetic dimensions Starting with the selving process the essay describes the role of signs and symbols in intra and interpersonal communication At the heart of the human use of signs is a creative tension between religious symbols and the novel symbols created in the various arts A contrast is made between natural communities which flatten out and reject novel forms of semiosis and communities of interpretation which welcomes creative and enriched signs and symbols The normative claim is made that religious sign symbol systems have a tendency toward tribalism and violence while the various spheres of the aesthetic are comparatively non tribal or even deliberately anti tribal The concept experience of beauty and the sublime is meant to replace that of religious revelation The sublime is not merely an internal mode of attunement contra Kant but comes from the very depths of nature in the potencies of nature naturing
