been devised utilizing in a novel and ingenious way the latent power of a discharging jet of steam From the time of his graduation from L Ecole Centrale in 1849 Giffard had directed his energies to the study of aeronautics and had spent much time in developing a light steam motor for propelling balloons it is therefore not strange that he should also have attempted to devise a compact and convenient substitute for the steam pumps then in use Already a number of patents had been granted him for the application of the steam engine to aerial navigation and for other correlated inventions When on May 8 1858 letters patent were issued for L'injecteur Automoteur His early technical education and wonderful ingenuity well fitted him for breaking away from the old beaten paths and starting out on a new line of discovery and in view of the originality of his work he fully deserved the unqualified praise accorded him by his contemporaries About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Practice and Theory of the Injector* Strickland L. Theory and Practice of Swirl Atomizers Yuriy I Khavkin, 2003-10-28 In this book prominent Russian scientist Yuriy I Khavkin shows that the droplet sizes in swirl atomizers depend only on the specific energy of the liquid drops and on viscosity The new theory based only on two parameters is shown to be far simpler and in better agreement with experimental data than any previous presentations The following topics are included in the book The solution of the Navier Stokes equation for a liquid rotating flow Atomizers for gas turbine combustion chambers Atomizers for high capacity steam boilers Atomizers for liquid propellant rocket engines Quality of liquid atomization by non swirl atomizers A unique table of experimental data of 232 atomizers enables the reader to find an atomizer with the flow rate from 5 kg/h to 15 000 kg/h Readers will also learn To create an atomizer with the given mean droplet size To create an atomizer with the given droplet size distribution To create an atomizer with the given limits of flow rate control The book is intended for the design engineer as well as the theoretical scientist **Practice and Theory of the Injector - Primary Source Edition** Strickland Landis Kneass, 2013-10-01 This is a reproduction of a book published before 1923 This book may have occasional imperfections such as missing or blurred pages poor pictures errant marks etc that were either part of the original artifact or were introduced by the scanning process We believe this work is culturally important and despite the imperfections have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide We appreciate your understanding of the imperfections in the preservation process and hope you enjoy this valuable book *Practice and Theory of the Injector - Scholar's Choice Edition* Strickland Landis Kneass, 2015-02-17 This work has been selected by
