Reduction And Resolution Computation And Logic:

Computability, Complexity, Logic E. Börger, 1989-07-01 The theme of this book is formed by a pair of concepts the concept of formal language as carrier of the precise expression of meaning facts and problems and the concept of algorithm or calculus i e a formally operating procedure for the solution of precisely described questions and problems The book is a unified introduction to the modern theory of these concepts to the way in which they developed first in mathematical logic and computability theory and later in automata theory and to the theory of formal languages and complexity theory Apart from considering the fundamental themes and classical aspects of these areas the subject matter has been selected to give priority throughout to the new aspects of traditional questions results and methods which have developed from the needs or knowledge of computer science and particularly of complexity theory It is both a textbook for introductory courses in the above mentioned disciplines as well as a monograph in which further results of new research are systematically presented and where an attempt is made to make explicit the connections and analogies between a variety of concepts and constructions

Logic Programming and Automated Reasoning Andrei Voronkov, 1993-06-29 LPAR is an international conference series aimed at bringing together researchers interested in logic programming and automated reasoning The research in logic programming grew out of the research in automated reasoning in the early 1970s Later the implementation techniques known from logic programming were used in implementing theorem proving systems Results from both fields applied to deductive databases This volume contains the proceedings of LPAR 93 which was organized by the Russian Association for Logic Programming The volume contains 35 contributed papers selected from 84 submissions together with an invited paper by Peter Wegner entitled Reasoning versus modeling in computer science

Computational Logic Ulrich Berger, Helmut Schwichtenberg, 2012-12-06 Recent developments in computer science clearly show the need for a better theoretical foundation for some central issues. Methods and results from mathematical logic in particular proof theory and model theory are of great help here and will be used much more in future than previously. This book provides an excellent introduction to the interplay of mathematical logic and computer science. It contains extensively reworked versions of the lectures given at the 1997 Marktoberdorf Summer School by leading researchers in the field. Topics covered include proof theory and specification of computation, J. Y. Girard's complexity of proofs and programs, S. R. Buss's computational content of proofs, H. Schwichtenberg's constructive type theory, P. Aczel's Barendregt's rewriting logic, J. Meseguer and game semantics, S. Abramski's Constable's computational mathematics, U. Martin's rewriting logic, and game semantics.

Logical Aspects of Computational Linguistics. Celebrating 20 Years of LACL (1996-2016) Maxime Amblard, Philippe de Groote, Sylvain Pogodalla, Christian Retoré, 2016-11-21 Edited under the auspices of the Association of Logic Language and Information FoLLI, this book constitutes the refereed proceedings of the 20th anniversary of the International Conference on Logical Aspects of Computational Linguistics LACL 2016 held in LORIA Nancy France in December 2016. The 19 contributed papers presented together with 4 invited papers and 6 abstracts were carefully reviewed and selected from 38 submissions. The focus of the conference is the use of type theoretic proof theoretic and model theoretic methods for describing and formalising natural language syntax semantics and pragmatics as well as the implementation of the corresponding tools.

Demonstration of added value of applied computational intelligence. Presentation of direct and potential real world applications of applied computational intelligence.

Logic for Computer Science Jean H. Gallier, 2015-05-18 This advanced text for undergraduate and graduate students introduces mathematical logic with an emphasis on proof theory and procedures for algorithmic construction of formal proofs. The self contained treatment is also useful for computer scientists and mathematically inclined readers interested in the formalization of proofs and basics of automatic theorem proving. Topics include propositional logic and its resolution, first order logic, Gentzen's cut elimination theorem and applications, and Gentzen's sharpened Hauptsatz and Herbrand's theorem. Additional subjects include resolution in first order logic, SLD resolution, logic programming and the foundations of PROLOG and many sorted first order logic. Numerous problems appear throughout the book and two Appendixes provide practical background information.
