These authors have reviewed the tremendous body of literature in the field in order to compile a set of reliable tested and proven methods alongside step by step guidance. This practical resource not only explores synthetic methodology but also reaction mechanisms and applications in medicinal chemistry and drug discovery. The publication begins with an introductory chapter covering general principles and methodologies nomenclature and strategies of stereoselective synthesis. Next it is divided into three parts: Part One General Methods and Strategies; Part Two Stereoselective Synthesis by Bond Formation including C-C bond formation, C-H bond formation, C-O bond formation, C-N bond formation, Other C heteroatom formation and other bond formation; Part Three Methods of Analysis and Chiral Separation. Tartaric and Malic Acids in Synthesis Jacek Gawronski,Krystyna Gawronska,1999-02-17 The many exciting advances

made in asymmetric synthesis over the past two decades have been due in great part to applications of tartaric and malic acid derivatives. Because of their unparalleled usefulness in synthesizing nonracemic acyclic and heterocyclic compounds, tartaric and malic acids are now considered indispensable tools of the trade for chemists working in natural products, fine chemicals, and pharmaceutical research. *Tartaric and Malic Acids in Synthesis* provides chemists with a concise yet comprehensive review of the chemical properties and synthetic applications of derivatives of tartaric and malic acids. Intended as a source of information and inspiration, it contains a gold mine of ideas on the use of tartaric and malic acids in synthesis, not only as chiral building blocks but as chiral ligands, auxiliaries, and resolving agents as well. Throughout, the primary focus is on four-carbon building blocks derived from tartaric and malic acids and their synthetically useful reactions. Designed for ready reference, this book follows a simple hierarchical organization, moving from derivatives of carboxy groups to derivatives of hydroxy groups and finally to products of reduction of the carboxy groups, and includes hundreds of reaction schemes and figures. More than 70 tables with data and references for 2,000 compounds. Over 2,500 references to primary, secondary, and patent literature sources. *Tartaric and Malic Acids in Synthesis* is a valuable working resource for chemists involved in the design of enantioselective syntheses. It is also an excellent supplementary text for graduate students of synthetic organic chemistry and natural products chemistry.
