Reductive Logic And Proof Search Proof Theory Semantics And Control:

Reductive Logic and Proof-search David J. Pym, 2004 Reductive Logic and Proof-search David J. Pym, Eike Ritter, 2004-04-29 This book is a specialized monograph on the development of the mathematical and computational metatheory of reductive logic and proof search areas of logic that are becoming important in computer science A systematic foundational text on these emerging topics it includes proof theoretic semantic model theoretic and algorithmic aspects The scope ranges from the conceptual background to reductive logic through its mathematical metatheory to its modern applications in the computational sciences Suitable for researchers and graduate students in mathematical computational and philosophical logic and in theoretical computer science and artificial intelligence this is the latest in the prestigious world renowned Oxford Logic Guides which contains Michael Dummett's Elements of intuitionism 2nd Edition Dov M Gabbay Mark A Reynolds and Marcelo Finger's Temporal Logic Mathematical Foundations and Computational Aspects J M Dunn and G Hardegree's Algebraic Methods in Philosophical Logic H Rott's Change Choice and Inference A Study of Belief Revision and Nonmonotonic Reasoning and P T Johnstone's Sketches of an Elephant A Topos Theory Compendium Volumes 1 and 2

Logic Programming Maria Garcia Banda, Enrico Pontelli, 2008-12-15 This book constitutes the refereed proceedings of the 24th International Conference on Logic Programming ICLP 2008 held in Udine Italy in December 2008 The 35 revised full papers together with 2 invited talks 2 invited tutorials 11 papers of the co located first Workshop on Answer Set Programming and Other Computing Paradigms ASPOCP 2008 as well as 26 poster presentations and the abstracts of 11 doctoral consortium articles were carefully reviewed and selected from 177 initial submissions The papers cover all issues of current research in logic programming they are organized in topical sections on applications algorithms systems and implementations semantics and foundations analysis and transformations CHRs and extensions implementations and systems answer set programming and extensions as well as constraints and optimizations *Set Theory* John L. Bell, 2011-05-05 This monograph is a follow up to the author's classic text Boolean Valued Models and Independence Proofs in Set Theory providing an exposition of some of the most important results in set theory obtained in the 20th century the independence of the continuum hypothesis and the axiom of choice Aimed at research students and academics in mathematics mathematical logic philosophy and computer science the text has been extensively updated with expanded introductory material new chapters and a new appendix on category theory and includes recent developments in the field Numerous exercises

Fragments of First-Order Logic Ian Pratt-Hartmann, 2023 Pratt Hartmann considers for which fragments of first order logic there is an effective method for determining satisfiability or finite satisfiability Furthermore he asks if these problems are decidable for some fragment what is their computational complexity Bolzano's Logical System Ettore Casari, 2016-09-08 This book is focused on the first three parts of Bolzano's Theory of Science and introduces a more systematic reconsideration of Bolzano's logical thought In undertaking this task the book is intended as an exploration not so

much of the more specifically discursive aspects of Bolzano's logical thought already amply studied as much as on identifying the singularly coherent and systematic nature of the logic presented in Bolzano's work Casari presents this within a formal system and adopts the approach of the predicate calculus with identity and choice operator by using Hilbert's epsilon calculus the logical formalism developed by David Hilbert in the service of his program in the foundations of mathematics

Simplicity Theory Byunghan Kim, 2014 An up to date account of the current techniques and results in Simplicity Theory which has been a focus of research in model theory for the last decade Suitable for logicians mathematicians and graduate students working on model theory

Category Theory Steve Awodey, 2010-06-17 A comprehensive reference to category theory for students and researchers in mathematics computer science logic cognitive science linguistics and philosophy Useful for self study and as a course text the book includes all basic definitions and theorems with full proofs as well as numerous examples and exercises

Consequence Relations Alex Citkin, Alexei Muravitsky, 2022 An in depth study of the concept of a consequence relation culminating in the concept of a Lindenbaum Tarski algebra intended for advanced undergraduate and graduate students in mathematics and philosophy as well as researchers in the field of mathematical and philosophical logic

The Structure of Models of Peano Arithmetic Roman Kossak, James Schmerl, 2006-06-29 Aimed at graduate students research logicians and mathematicians this much awaited text covers over 40 years of work on relative classification theory for nonstandard models of arithmetic The book covers basic isomorphism invariants families of type realized in a model lattices of elementary substructures and automorphism groups

Computability and Randomness André Nies, 2012-03-29 The interplay between computability and randomness has been an active area of research in recent years reflected by ample funding in the USA numerous workshops and publications on the subject The complexity and the randomness aspect of a set of natural numbers are closely related Traditionally computability theory is concerned with the complexity aspect However computability theoretic tools can also be used to introduce mathematical counterparts for the intuitive notion of randomness of a set Recent research shows that conversely concepts and methods originating from randomness enrich computability theory The book covers topics such as lowness and highness properties Kolmogorov complexity betting strategies and higher computability Both the basics and recent research results are described providing a very readable introduction to the exciting interface of computability and randomness for graduates and researchers in computability theory theoretical computer science and measure theory

Interpolation and Definability Dov M. Gabbay, Larisa Maksimova, 2005-05-12 This book is a specialized monograph on interpolation and definability a notion central in pure logic and with significant meaning and applicability in all areas where logic is applied especially computer science artificial intelligence logic programming philosophy of science and natural language Suitable for researchers and graduate students in mathematics computer science and philosophy this is the latest in the prestigious world renowned Oxford Logic Guides which contains Michael Dummett's Elements of intuitionism second edition J M Dunn and G Hardegree's Algebraic

Structure to Power The volume also includes a scientific autobiography and an overview of the contributions The outstanding set of contributors to this volume including both senior and early career academics serve as testament to Samson Abramsky's enduring influence It will provide an invaluable and unique resource for both students and established researchers **The**

Bulletin of Symbolic Logic ,2006 The Semantics and Proof Theory of the Logic of Bunched Implications David J. Pym,2013-04-17 This is a monograph about logic Specifically it presents the mathematical theory of the logic of bunched implications BI I consider BI's proof theory model theory and computation theory However the monograph is also about informatics in a sense which I explain Specifically it is about mathematical models of resources and logics for reasoning about resources I begin with an introduction which presents my background view of logic from the point of view of informatics paying particular attention to three logical topics which have arisen from the development of logic within informatics Resources as a basis for semantics Proof search as a basis for reasoning and The theory of representation of object logics in a meta logic The ensuing development represents a logical theory which draws upon the mathematical philosophical and computational aspects of logic Part I presents the logical theory of propositional BI together with a computational interpretation Part II presents a corresponding development for predicate BI In both parts I develop proof model and type theoretic analyses I also provide semantically motivated computational perspectives so beginning a mathematical theory of resources I have not included any analysis beyond conjecture of properties such as decidability finite models games or complexity I prefer to leave these matters to other occasions perhaps in broader contexts **Book Review**
