The regenerative method for analysing stochastic simulations

DONALD L. IGLEHART, *Stanford University*

This expository paper surveys recent work on the estimation of parameters associated with the output of stochastic simulations. The regenerative method enables the simulator to select a starting state, determine run lengths required for prescribed accuracy, and construct confidence intervals. In the context of the regenerative method the following topics will be discussed: ratio estimators, quantile estimation, selection problem, control variates and approximation techniques. Theoretical calculations and simulation results will be presented for some simple stochastic processes.

Stochastic processes in fluctuation theory

MARK KAC, *Rockefeller University*
