Particulars, Actuality, and Identity over Time, vol 4 Michael Tooley,2013-10-08 Volume 4 in the 5 volume series titled Analytical Metaphysics The essays in this volume are concerned with three main issues First what account can be given of the nature of a particular Second is identity over time a basic and irreducible relation or can it be analysed If so what is the correct analysis Third what account can be offered of what it is to be actual The final account of this volume involves the claim that actuality is a special property that is possessed by one and only one possible world **Leap Through Time**

Harold Leonard,2016-04-27 Imagine if you were given the chance to step into a machine and journey through the barriers of time toward any moment in the past Where would you go What would you want to find out After a lifetime of apprenticing under a professor and father figure whose theories made building such a device possible Ben Stone was suddenly presented with the opportunity His choice was one that many would make to travel back to the crucifixion of Jesus and finding himself sealed in the tomb What he experiences is not at all what he expected This is just the beginning of his adventures Join Ben as he leaps through time to discover some of life s biggest mysteries **Archaeology and the Social History of Ships**

Richard A. Gould,2000-04-13 Maritime archaeology deals with shipwrecks and is carried out by divers rather than diggers But this is by no means a marginal branch of archaeology It embraces maritime history analysing changes in ship building navigation reconstructing the infrastructure of waterborne commerce and offers fresh perspectives on the cultures and societies that produced the ships and sailors Drawing on detailed and recent case studies Richard Gould provides an up to date review of the field and a clear exposition of new developments in undersea technologies He also argues for the careful management of underwater cultural resources **Practical Design of Ships and Other Floating Structures** Tetsuo

Gabriel, 2006-11-30 Once warfare became established in ancient civilizations it's hard to find any other social institution that developed as quickly In less than a thousand years humans brought forth the sword sling dagger mace bronze and copper weapons and fortified towns The next thousand years saw the emergence of iron weapons the chariot the standing professional army military academies general staffs military training permanent arms industries written texts on tactics military procurement logistics systems conscription and military pay By 2 000 B C E war was an important institution in almost all major cultures of the world This book shows readers how soldiers were recruited outfitted how they fought and how they were cared for when injured or when they died It covers soldiers in major civilizations from about 4000 B C E to about 450 C E Topics are discussed cross culturally drawing examples from several of the cultures armies and time periods within each chapter in order to provide the reader with as comprehensive an understanding as possible and to avoid the usual Western centric perspective too common in analyses of ancient warfare **The Double Lives of Objects** Thomas Sattig, 2015-02-19 Thomas Sattig develops and defends a novel philosophical picture of ordinary objects such as persons tables trees and mountains His theory carves a middle way between the two accounts that have dominated traditional metaphysics of material objects namely classical mereology and Aristotelian hylomorphism It answers metaphysical semantical and psychological questions in a unified framework What is the nature of ordinary objects How do we speak about such objects And how do we conceive of them The core thesis is that ordinary objects lead double lives they are compounds of matter and form and since their matter and form have different qualitative profiles ordinary objects can be described differently from different conceptual perspectives A philosophical theory of ordinary objects faces the hard task of saving our common sense conception of objects from a wide range of hard problems that present our familiar worldview as internally inconsistent and as incompatible with plausible metaphysical principles The book argues that the proposed theory does a better job than its rivals in saving the appearances The key that unlocks each problem is that seemingly inconsistent judgements about objects are really consistent because they manifest different perspectives on the same double layered objects Many long standing philosophical mysteries about ordinary objects dissolve once we realize that they lead double lives The theory contributes to a wide variety of philosophical debates including those about parts and composition
