Anti-Aging Medicine Hidekazu Yamada, Yuji Naito, 2025-02-05

This textbook considers aging as a disease and summarizes the leading edge research and facts on anti-aging medicine and the aging mechanism. It provides the basics and biology of aging science followed by presenting clinical studies such as exercise, nutrition, mental health, brain, sleep, and treatment interventions. The book also discusses aging control and considers behavioral, environmental, and societal implications for healthy aging. The field of aging science is interdisciplinary and there are much more uncertainties; thus, it is crucial to summarize what is currently known to set a foundation for future research. The International Classification of Diseases by the World Health Organization (WHO) has given the aging-related disease a subcode of XT9T. This trend advanced research of aging-related sicknesses and the concept that infirmities associated with old age can be controlled such as cancer, dementia, and cardiovascular diseases. Basic research has progressed and clinical applications have become available, resulting in significant social changes. As increased life expectancy is happening over the globe, we are facing unprecedented challenges, and anti-aging medicine is a key to treating population growth, environmental problems, etc., as problems for the entire planet.

Anti-Aging Medicine: Basics and Clinical Practice is an English translation of the publication by the Japanese Society of Anti-Aging Medicine. It is an insightful source for healthcare professionals and scholars in anti-aging and geriatrics. It will attract pharmaceutical, Information Technology, and Artificial Intelligence industries associated with aging-responsive markets. The English translation of this book, originally in Japanese, was facilitated by artificial intelligence. A subsequent human revision of the content was done by the editors and authors.

Nutrition, Food and Diet in Ageing and Longevity Suresh I. S. Rattan, Gurcharan Kaur, 2021-10-03

This edited volume is a compilation of 30 articles discussing what constitutes food for health and longevity. The aim is to provide up-to-date information, insights, and future tendencies in the ongoing scientific research about nutritional components, food habits, and dietary patterns in different cultures. The health-sustaining and health-promoting effects of food are certainly founded in its overall composition of macronutrients and micronutrients. However, the consumption of these nutrients is normally in the form of raw or prepared food from the animal and plant sources. The book is divided into four parts and a conclusion and successfully conveys the well-established information and knowledge along with the personal views of a diversified group of researchers and academicians on the multifaceted aspects of nutrition, food, and diet. The first part reviews the scientific information about proteins, carbohydrates, fats, and oils, micronutrients, pro and pre-biotics, and hormetins, along with a discussion of the evolutionary principles and constraints about what is optimal food, if any. The second part discusses various kinds of foods and food supplements with respect to their claimed benefits for general health and prevention of some diseases. The third part brings in the cultural aspects such as what are the principles of healthy eating according to the traditional Chinese and Indian systems, what is the importance of meal times and daily rhythms, and how different cultures

have developed different folk wisdoms for eating for health longevity and immortality In the part four various approaches which are either already in practice or are still in the testing and research phases are discussed and evaluated critically for example intermittent fasting and calorie restriction food based short peptides senolytics Ayurvedic compounds optimal food for old people and food for the prevention of obesity and other metabolic disorders The overreaching aim of this book is to inform inspire and encourage students researchers educators and medical health professionals thinking about food and food habits in a holistic context of our habits cultures and patterns Food cannot be reduced to a pill of nutritional components Eating food is a complex human behavior culturally evolved over thousands of years Perhaps the old adage we are what we eat needs to be modified to we eat what we are

Stem Cell Biology and Regenerative Medicine Charles Durand,Pierre Charbord,2022-09-01 The study of stem cell biology is under intensive investigations Because stem cells have the unique capability to self renew and differentiate into one or several cell types they play a critical role in development tissue homeostasis and regeneration Stem cells also constitute promising cell candidates for cell therapy The aim of this book is to provide an accurate knowledge on stem cell biology and regenerative medicine This book will cover many topics in the field and is based on seminars given by recognized scientists involved the international master program on stem cell biology at the University Pierre and Marie Curie UPMC in Paris
