Looking For Earths The Race To Find New Solar Systems:

Looking for Earths Alan Boss,1998-09-22 Along the way we meet all the major players from astronomer Peter van de Kamp whose dreams of discovery lived on undeterred even after years of painstaking observations proved futile to maverick NASA administrator Daniel Goldin who dared to suggest in 1992 that perhaps just perhaps the next generation s legacy will be an image of a planet 30 light years from Earth We watch as the brilliant innovators Michel Mayor and Didier Queloz invent a new method for detection and defying all odds make the first major discovery by looking in territory where seasoned astronomers said no planets could ever be found Looking for Earths Alan Boss,2000-03-09 The ultimate insider s account of astronomy s fantastic voyage in search of brave new worlds in faraway galaxies Highly recommended Science and Technology Full of humor heartbreak and a deep understanding of the ardor and luck that compose years of research The reader becomes not merely a receiver of Boss s vision but a fellow explorer Astronomy A rewarding account Scientific American Are we alone in the universe or are there other planets generating and sustaining life The question may be as old as civilization but in the twilight of a century marked by countless frustrated quests to find other solar systems several teams of pioneering astronomers have at last discovered a rich crop of mammoth Jupiter sized gas planets the first compelling evidence that there may indeed be life in other galaxies In Looking for Earths a prominent planetary scientist takes us along on this thrilling hunt for new life revealing the behind the scenes stories of scientific determination frustration and triumph Ushering us to the mountaintop observatories that house the world s most powerful telescopes and into the tension filled scientific meetings where new results are announced and old results overturned Alan Boss brings the process of exploration vividly alive Experience the roller coaster ride as intricate observations of minuscule stellar wobbles raise hopes that at last a true planet has been found only to be almost immediately shattered by more powerful observations Boss also introduces the principal players whose dreams defied all odds and made the first major discovery possible Like no other book Looking for Earths captures the lively tension between theory and observation that defines cutting edge astronomical discovery along with the heated battles that will determine the direction of big ticket American astronomy for years to come You will find no better introduction to one of the truly revolutionary developments in modern astronomy *Natural History* *Universal Life* Alan Boss,2019 The Kepler space telescope spent four years looking for Earth like planets in our galaxy A revolution in thinking about our place in the universe resulted Are Earths commonplace or rare Are we likely to be alone in the universe Only Kepler could answer these questions Author Alan Boss the Chair of NASA s Exoplanet Exploration Program Analysis Group presents what the Kepler mission found 360 Degrees of Reading W. Rubin,2021-11-09 The solar system has always been a messy place in which gravity wreaks havoc Moons form asteroids and comets crash into planets ice ages commence and dinosaurs disappear By describing the dramatic consequences of such disturbances this authoritative and entertaining book reveals the fundamental interconnectedness of the solar system and what it means for life on Earth After relating a brief history of the solar system Alan Rubin describes how astronomers determined our location in the Milky Way He provides succinct and up to date accounts of the energetic interactions among planetary bodies the generation of the Earth s magnetic field the effects of other solar system objects on our climate the moon s genesis the heating of asteroids and the origin of the mysterious tektites Along the way Rubin introduces us to the individual scientists including the famous the now obscure and the newest generation of researchers who have enhanced our understanding of the galactic neighborhood He shows how scientific discoveries are made he discusses the uncertainty that presides over the boundaries of knowledge as well as the occasional reluctance of scientists to change their minds even when confronted by compelling evidence This fresh historical perspective reveals science as it is an imperfect but self correcting enterprise Journeying to the frontiers of knowledge Rubin concludes with the exciting realm of astrobiology He chronicles the history of the search for life on Mars and describes cutting edge lines of astrobiological inquiry including panspermia the possible transfer of life from planet to planet the likelihood of technologically advanced alien civilizations in our galaxy and our probable responses to alien contact Authoritative and up to date but also entertaining and fluidly written *Disturbing the Solar System* will appeal to any reader who has ever picked up a rock or gazed at the moon with a sense of wonder The Living Cosmos Chris Impey,2007-12-11 Astrobiology the study of life in space is one of today s fastest growing and most popular fields of science In this compelling accessible and elegantly reasoned new book award winning scholar and researcher Chris Impey explores the foundations of this rapidly developing discipline where it s going and what it s likely to find The journey begins with the earliest steps of science gaining traction through the revelations of the Renaissance including Copernicus s revolutionary declaration that the

Earth was not the center of the universe but simply a planet circling the sun But if Earth is not the only planet it is so far the only living one that we know of In fascinating detail The Living Cosmos reveals the incredible proliferation and variety of life on Earth paying special tribute to some of its hardest life forms extremophiles a dizzying array of microscopic organisms compared in Impey's wise and humorous prose to superheroes that can survive extreme heat and cold live deep within rocks or thrive in pure acid From there Impey launches into space where astrobiologists investigate the potential for life beyond our own world Is it to be found on Mars the death planet that has foiled most planetary missions and which was wet and temperate billions of years ago Or on Venus Earth's evil twin where it rains sulfuric acid and whose heat could melt lead Whoever named it after the goddess of love had a sorry history of relationships The answer may lie in a moon within our Solar System or it may be found in one of the hundreds of extra solar planets that have already been located The Living Cosmos sees beyond these explorations and imagines space vehicles that eschew fuel for solar or even nuclear powered rockets all sent by countries motivated by the millions to be made in space tourism But The Living Cosmos is more than just a riveting work about experiment and discovery It is also an affecting portrait of the individuals who have devoted their lives to astrobiology Illustrated throughout The Living Cosmos is a revelatory book about a science that is changing our view of the universe a mesmerizing guide to what life actually means and where it may or may not exist and a stunning work that explains our past as it predicts our future From the Hardcover edition [Habitability of Other Planets and Satellites](#)

Jean-Pierre de Vera, Joseph Seckbach, 2013-07-30 Is the Earth the right model and the only universal key to understand habitability the origin and maintenance of life Are we able to detect life elsewhere in the universe by the existing techniques and by the upcoming space missions This book tries to give answers by focusing on environmental properties which are playing a major role in influencing planetary surfaces or the interior of planets and satellites The book gives insights into the nature of planets or satellites and their potential to harbor life Different scientific disciplines are searching for the clues to classify planetary bodies as a habitable object and what kind of instruments and what kind of space exploration missions are necessary to detect life Results from model calculations field studies and from laboratory studies in planetary simulation facilities will help to elucidate if some of the planets and satellites in our solar system as well as in extra solar systems are potentially habitable for life *100 Greatest Science Discoveries of All Time* Kendall Haven, 2007-02-28 Brimming with fascinating and fun facts about 100 scientific breakthroughs this collection presents the real stories behind the history of science at the same time offering a panoramic overview of the history of science and an introduction to some of the most important scientists in history Grades 6 and up Throughout history science has changed lives and dramatically altered the way in which the universe is perceived Focusing on the 100 most significant scientific events of all time from Archimedes' discovery of the two fundamental principles underlying physics and engineering levers and buoyancy in 260 B C E to human anatomy Jupiter's moons electrons black holes the human genome and more storyteller Kendall Haven has created a ready
