States of Nature Stuart George McCook,2010-07-05 The process of nation building in Latin America transformed the relations between the state the economy and nature Between 1760 and 1940 the economies of most countries in the Spanish Caribbean came to depend heavily on the export of plant products such as coffee tobacco and sugar After the mid nineteenth century this model of export led economic growth also became a central tenet of liberal projects of nation building As international competition grew and commodity prices fell over this period Latin American growers strove to remain competitive by increasing agricultural production By the turn of the twentieth century their pursuit of export led growth had generated severe environmental problems including soil exhaustion erosion and epidemic outbreaks of crop diseases and pests This book traces the history of the intersections between nature economy and nation in the Spanish Caribbean through a history of the agricultural and botanical sciences Growers and governments in Venezuela Puerto Rico Cuba Colombia and Costa Rica turned to scientists to help them establish practical and ideological control over nature They hoped to use science to alleviate the pressing environmental and economic stresses without having to give up their commitment to export led growth Starting from an overview of the relationship among science nature and development throughout the export boom of 1760 to 1930 Stuart McCook examines such topics as the relationship between scientific plant surveys and nation building the development of a creole science to address the problems of tropical agriculture the ecological rationalization of the sugar industry and the growth of technocratic ideologies of science and progress He concludes with a look at how the Great Depression of the 1930s changed the paradigms of economic and political development and the role of science and nature in these paradigms

colonial times picture slavery based societies and explore aspects of dependency relations that emerged in the aftermath of abolition in Brazil and Africa

Tropical Alpine Environments Philip W. Rundel, Alan P. Smith, F. C. Meinzer, 1994-09
Plants growing in tropical alpine environments at altitudes above the closed canopy forest and below the limit of plant life have evolved distinct forms to cope with a hostile environment characterized by cold drought and fire Unlike temperate alpine environments where there are distinct seasons of favourable and unfavourable conditions for growth tropical alpine habitats present summer conditions every day and winter conditions every night Using examples from all over the tropics this fascinating account reviews for the first time the unique form and functional relationships of tropical alpine plants examining both their physiological ecology and population biology It will appeal to anyone interested in tropical vegetation and plant physiological adaptations to hostile environment as well as to researchers in biogeography and ecology

Columnar Cacti and Their Mutualists Theodore H. Fleming, Alfonso Valiente-Banuet, 2021-11-30 Although cacti such as the saguaro and organ pipe have come to define the Sonoran Desert for many people they represent some 170 species of columnar cacti found in many parts of the Americas These giant plants are so dominant in some ecosystems that many species of animals rely on them for food and shelter They are pollinated by bats in central Mexico and Venezuela by birds and bees in northern Mexico and Peru This book summarizes our current knowledge about the ecology evolution and conservation of columnar cacti and their vertebrate mutualists to show that the very survival of these cacti depends on animals who pollinate them and disperse their seeds Contributors from the United States Mexico Venezuela and Colombia explore aspects of geology and evolution that have forged this relationship review findings in anatomy and physiology and discuss recent research in population and community ecology as well as conservation issues Ranging from the Sonoran Desert to the northern Andes these studies reflect recent progress in understanding how abiotic and biotic factors interact to influence the evolution distribution and abundance of cacti and mutualists alike In addition this book examines the ways in which humans through the process of domestication have modified these plants for economic benefit The contributors also review phylogenetic relationships between cacti and nectar feeding bats in an effort to understand how bat plant interactions have influenced the evolution of diversity and ecological specialization of both Because of the number of migratory pollinators feeding on columnar cacti the authors make conservation recommendations aimed at preserving fully functional ecosystems in arid portions of the New World tropics and subtropics No other book treats the pollination ecology of cacti in such depth or offers such a wealth of up to date material

on the nectar feeding bats of the New World As scientists become increasingly concerned with the need to protect biotic interactions *Columnar Cacti and Their Mutualists* provides a benchmark for both conservation efforts and future research
