Neural Networks for Knowledge Representation and Inference Daniel S. Levine, Manuel Aparicio, 1994 First Published in 1993 Routledge is an imprint of Taylor Francis an informa company *Neural Networks for Knowledge Representation and Inference* Daniel S. Levine, Manuel Aparicio IV, 2013-04-15 The second published collection based on a conference sponsored by the Metroplex Institute for Neural Dynamics the first is Motivation Emotion and Goal Direction in Neural Networks LEA 1992 this book addresses the controversy between symbolist artificial intelligence and neural network theory A particular issue is how well neural networks well established for statistical pattern matching can perform the higher cognitive functions that are more often associated with symbolic approaches This controversy has a long history but recently erupted with arguments against the abilities of renewed neural network developments More broadly than other attempts the diverse contributions presented here not only address the theory and implementation of artificial neural networks for higher cognitive functions but also critique the history of assumed epistemologies both neural networks and AI and include several neurobiological studies of human cognition as a real system to guide the further development of artificial ones Organized into four major sections this volume outlines the history of the AI neural network controversy the strengths and weaknesses of both approaches and shows the various capabilities such as generalization and discreteness as being along a broad but common continuum introduces several explicit theoretical structures demonstrating the functional equivalences of neurocomputing with the staple objects of computer science and AI such as sets and graphs shows variants on these types of networks that are applied in a variety of spheres including reasoning from a geographic database legal decision making story comprehension and performing arithmetic operations discusses knowledge representation process in living organisms including evidence from experimental psychology behavioral neurobiology and electroencephalographic responses to sensory stimuli *Fuzzy Petri Nets for Knowledge Representation, Acquisition and Reasoning* Hua Shi, Hu-Chen Liu, 2023-09-19 This book provides valuable knowledge useful fuzzy Petri nets FPN models and practical examples that can be considered by managers in supporting knowledge management of organizations to increase and sustain their competitive advantages In this book the authors proposed various improved FPN models to enhance the modeling power and applicability of FPNs in knowledge representation and reasoning This book is useful for practitioners and researchers working in the fields of knowledge management operation management information science industrial engineering and management science It can also be used as a textbook for postgraduate and senior undergraduate students **Knowledge-based Neurocomputing** Ian Cloete, Jacek M. Zurada, 2000 Looking at ways to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Neurocomputing methods are loosely based on a model of the brain as a network of simple interconnected processing elements corresponding to neurons These methods derive their power from the collective processing of artificial neurons the chief advantage being that such systems can learn and adapt to a changing environment

In knowledge based neurocomputing the emphasis is on the use and representation of knowledge about an application. Explicit modeling of the knowledge represented by such a system remains a major research topic. The reason is that humans find it difficult to interpret the numeric representation of a neural network. The key assumption of knowledge based neurocomputing is that knowledge is obtainable from or can be represented by a neurocomputing system in a form that humans can understand. That is the knowledge embedded in the neurocomputing system can also be represented in a symbolic or well structured form such as Boolean functions, automata, rules or other familiar ways. The focus of knowledge based computing is on methods to encode prior knowledge and to extract, refine and revise knowledge within a neurocomputing system.

Knowledge Graphs for eXplainable Artificial Intelligence: Foundations, Applications and Challenges
 Freddy Lécué, 2020-05-06. The latest advances in Artificial Intelligence and deep Machine Learning in particular revealed a major drawback of modern intelligent systems, namely the inability to explain their decisions in a way that humans can easily understand. While eXplainable AI rapidly became an active area of research in response to this need for improved understandability and trustworthiness, the field of Knowledge Representation and Reasoning (KRR) has on the other hand a long standing tradition in managing information in a symbolic, human understandable form. This book provides the first comprehensive collection of research contributions on the role of knowledge graphs for eXplainable AI (KG4XAI) and the papers included here present academic and industrial research focused on the theory, methods and implementations of AI systems that use structured knowledge to generate reliable explanations. Introductory material on knowledge graphs is included for those readers with only a minimal background in the field, as well as specific chapters devoted to advanced methods, applications and case studies that use knowledge graphs as a part of knowledge based explainable systems (KBX systems). The final chapters explore current challenges and future research directions in the area of knowledge graphs for eXplainable AI. The book not only provides a scholarly state of the art overview of research in this subject area but also fosters the hybrid combination of symbolic and subsymbolic AI methods and will be of interest to all those working in the field.

Intelligent Spatial Decision Support Systems
 Yee Leung, 2012-12-06. In the past half century we have experienced two major waves of methodological development in the study of human behavior in space and time. The first wave was the well known quantitative revolution which propelled geography from a mainly descriptive discipline to a scientific discipline using formalism such as probability statistics and a large number of mathematical methods for analyzing spatial structures and processes under certainty and uncertainty. The second wave is the recent advancement of geographical information systems which equips geographers with automation in the storage, retrieval, analysis and display of data. Both developments have significant impacts on geographical studies in general and solutions to real life spatio-temporal problems.

in particular They have found applications in urban and regional planning automated mapping and facilities management transportation planning and management as well as environmental planning and management to name but a few examples Both developments have one thing in common They one way or the other use computer to process and analyze data However not until recently there has been very little interaction between the two Quantitative models have largely been developed independent of the underlying data models and structures representing the spatial phenomena or processes under study Display of analysis results has been primitive in terms of the utilization of computer graphic technologies Formal models in addition to their technical difficulties have poor capability in communication with users Geographical information systems on the other hand have originally been developed with a slight intention to entertain powerful analytical models

A New Paradigm of Knowledge Engineering by Soft Computing Liya Ding, Fuzzy Logic Systems Institute, 2001 Soft computing SC consists of several computing paradigms including neural networks fuzzy set theory approximate reasoning and derivative free optimization methods such as genetic algorithms The integration of those constituent methodologies forms the core of SC In addition the synergy allows SC to incorporate human knowledge effectively deal with imprecision and uncertainty and learn to adapt to unknown or changing environments for better performance Together with other modern technologies SC and its applications exert unprecedented influence on intelligent systems that mimic human intelligence in thinking learning reasoning and many other aspects Knowledge engineering KE which deals with knowledge acquisition representation validation inferencing explanation and maintenance has made significant progress recently owing to the indefatigable efforts of researchers Undoubtedly the hot topics of data mining and knowledge data discovery have injected new life into the classical AI world This book tells readers how KE has been influenced and extended by SC and how SC will be helpful in pushing the frontier of KE further It is intended for researchers and graduate students to use as a reference in the study of knowledge engineering and intelligent systems The reader is expected to have a basic knowledge of fuzzy logic neural networks genetic algorithms and knowledge based systems
