Neurotoxicity Guidebook Hazard Awareness:

The Food Safety Hazard Guidebook Richard Lawley, Laurie Curtis, Judy Davis, 2015-10-20 Food safety is important and consumers have a right to expect that those who supply the food that they buy have taken every care to manufacture products that will do them no harm Those with a responsibility for the regulation of the global food industry recognise this principle and legislate accordingly and the business of managing and regulating the safety of the food supply chain has come a long way in the last 25 years or so Prompted by the emergence of new food safety hazards such as the bacterial pathogens *Listeria monocytogenes* and *E coli* O157 powerful new techniques for evaluating and managing the risks presented by these threats have been developed For example hazard analysis critical control point or HACCP has now become the food safety management system of choice worldwide Although the food safety management tools are now widely available they are still virtually useless unless they are supported by adequate and accurate information HACCP does not work unless its practitioners have access to enough data and scientific knowledge to enable them to understand hazards and how to control them effectively The Food Safety Hazard Guidebook is an attempt to address the problem of accessing the available information by distilling the key facts about a wide range of individual food safety hazards into a single text The result is a guidebook rather than an encyclopaedia which acts as a portal for the immense and ever expanding body of scientific knowledge that exists for food safety It is an easy to use information resource for anyone with a professional interest in the safety of the food supply The book is easy to navigate and presents concise and carefully researched factual information on a wide range of biological and chemical hazards in a clear format that is designed to support risk analysis exercises and HACCP studies It covers a broad range of established and emerging food safety hazards and includes details of authoritative sources of further information many web based for those seeking to examine a topic in greater depth The section on food allergens is a particularly valuable component of the book the chapters on fish toxins are also useful and unusual in a book of this kind and bacterial pathogens are comprehensively covered One of the most important features of the book is the wide scope of the content and the highly structured format designed to help the reader find information quickly Other key benefits to the reader are The wide range of biological and chemical hazards covered in a single book Written specifically with food industry professionals in mind Easy to navigate and accessible for the non expert Clear and concise presentation of factual information presented in a format that lends itself to use in risk assessment exercises Inclusion of references and web links to reliable sources of further information on each chapter specifically designed for practical use by a professional readership

Handbook of Neurotoxicology Edward J. Massaro, 2001-11-12 Neurotoxicology is a broad and burgeoning field of research Its growth in recent years can be related in part to increased interest in and concern with the fact that a growing number of anthropogenic agents with neurotoxic potential including pesticides lead mercury and the polytypic byproducts of combustion and industrial production continue to be spewed into and accumulate in the environment In addition there is great interest in natural products including toxins as sources of therapeutic agents Indeed it is well known that many natural toxins of broadly differing structure produced or accumulated for predatory or defensive purposes and toxic agents accumulated incidentally by numerous species function to perturb nervous tissue Components of some of these toxins have been shown to be useful therapeutic agents and or research reagents Unfortunately the environmental accumulation of some neurotoxicants of anthropogenic origin especially pesticides and metals has resulted in incidents of human poisoning some of epidemic proportion and high levels of morbidity and mortality Furthermore an increasing incidence of neurobehavioral disorders some with baffling symptoms is confronting clinicians It is not clear whether this is merely the result of increased vigilance and or improved diagnostics or a consequence of improved health care In any case the role of exposure to environmental and occupational neurotoxicants in the etiology of these phenomena as well as neurodegenerative diseases is coming under increasing scrutiny and investigation
