Plant Polyphenols 2 Georg G. Gross, Richard W. Hemingway, Takashi Yoshida, 2012-12-06 rd This book has been developed from the proceedings of the 3 Tannin Conference honoring Professor Edwin Haslam Department of Chemistry University of Sheffield for his efforts and outstanding contributions to the field of plant polyphenols The meeting was held in Bend Oregon July 20 25 1998 with the objective of promoting collaboration between chemists and biologists to improve our understanding of the biological significance and to expand possibilities for use of plant polyphenols Special efforts were made to summarize current research on the influence of these compounds on human health As in our 2 Tannin Conference held in Houghton Michigan June 1991 we strove to build the international character of this meeting and were rewarded by an attendance of over 150 guests from 23 countries who enjoyed more than 50 lectures and 60 presentations Our thanks go to all those who contributed to our meeting A special thanks is extended to Professor G Wayne McGraw Department of Chemistry Louisiana College Pineville Louisiana who served as the financial manager of our meeting He his wife Bobbie McGraw and Helen Hemingway worked hard to make this meeting run as smoothly as possible We also would like to thank the Bend Chamber of Commerce Central Oregon Community College The Riverhouse Interstate Tours Wanderlust Tours and the people of Bend for welcoming our group to Central Oregon

Chemistry And Biology Of Ellagitannins: An Underestimated Class Of Bioactive Plant Polyphenols Stephane Quideau, 2009-01-05 This book is the first of its kind that focuses on the chemistry and biology of ellagitannins a special class of naturally occurring polyphenols which have so far not received the attention they deserve These polyphenolic substances are found in many plants including numerous food sources They not only exhibit unique structural features that fascinate most chemists who are aware of their existence but also express remarkable biological activities that have yet to attract the interest of the pharmaceutical industry This is surprising because ellagitannins have been identified as active principles in traditional Chinese medicines The principal aim of this book is to set the record straight Most if not all worldwide experts in each aspect of the chemistry and biology of this underestimated class of natural products have contributed to this book It covers topics such as their structural determination and natural occurrence the most up to date knowledge of their biosynthesis the current state of the art of their total chemical synthesis their main physicochemical properties and principal biological activities their presence in food and beverages and their related health effects All together nine chapters compose this book whose content is placed into historical perspective in a yet inspiring preface written by one of the pioneers in modern polyphenol research Professor Edwin Haslam This book will be useful not only to scientists involved in natural product research but also to lecturers and their students as a source of key references and or a textbook

Agroforestry in Europe Antonio Rigueiro-Rodríguez,Jim McAdam,María Rosa Mosquera-Losada,2008-11-09 Agroforestry has come of age during the past three decades The age old practice of growing trees and crops and sometimes animals in interacting combinations that has been ignored in the single commodity oriented agricultural and forestry development paradigms has been brought into the realm of modern land use Today agroforestry is well on its way to becoming a specialized science at a level similar to those of crop science and forestry science To most land use experts however agroforestry has a tropical connotation They consider agroforestry as something that can and can only be identified with the tropics That is a wrong perception While it is true that the tropics compared to the temperate regions have a wider array of agroforestry systems and hold greater promise for potential agroforestry interventions it is also true that agroforestry has several opportunities in the temperate regions too Indeed the role of agroforestry is now recognized in Europe as exemplified by this book North America and elsewhere in the temperate zone Current interest in ecosystem management in industrialized countries strongly suggests that there is a need to embrace and apply agroforestry principles to help mitigate the environmental problems caused or exacerbated by commercial agricultural and forestry production enterprises
