Discoveries In Plant Biology (Volume Iii) Shain-dow Kung,Shang-fa Yang,2000-06-12 Scientific progress hinges on continual discovery and the extension of previous discoveries The important series of volumes Discoveries in Plant Biology is specially compiled to provide a microcosmic atlas of the landmark discoveries that span the breadth of plant biology Written by renowned plant biologists the papers describe how classic discoveries were made and how they have served as the basis for subsequent

breakthroughs The 24 chapters in this third volume describe discoveries which contribute to the foundations of modern plant biology The contributors many of whom personally lit the way bring readers back in time as if on a journey to retrace the paths and rethink the ideas they followed These guided tours on how to decipher the natural laws will lead to an appreciation of the development of each field from simple concepts to an advanced multidisciplinary field of today This volume will be of special interest to botanists biochemists plant physiologists and geneticists and of general interest to those who are still fascinated by how discoveries are made

Classic Papers, 1997-06-20 Articles in this Classic Papers volume are rewritten up dated and extended versions of papers published in previous volumes of *Advances in Botanical Research* chosen because of the high citation of the original papers and the increase of knowledge in the field today Boulter and Croy discuss the structure and biosynthesis of legume seed storage proteins an area that has been revolutionized in recent years by advances in 3 D structural analysis and methods of gene manipulation Raven writes about the significant progress made in our understanding of the biochemistry of inorganic carbon acquisition by marine autotrophs and places this new information in evolutionary and biogeochemical contexts Advances in biochemistry have also made impact on research into cyanotoxins Carmichael considers the expansion of cyanotoxin research in the light of the negative impact of these toxins on water quality and aquaculture industries The structure and regulation of algal photosystems are discussed by Larkum and Howe They write about the diversity of algal photochemical apparatus and light harvesting strategy which has only been appreciated with the use of molecular genetic approaches Finally Kunze Saedler and Loonig review advances in the field of plant transposable elements and the mechanism of transposition They cover the role of transposable elements in evolution and their use as molecular tools the importance of which has only speculated on in the original paper in 1986

Henry, P.

Kettlewell, 2012-12-06 Cereals range from human food and beverages to animal feeds and industrial products It is human food and beverages which are the predominant uses covered in this book since the nutritional quality of cereals for animal feed is described in other publications on animal nutrition and industrial products are a relatively minor use of cereals Cereals are the main components of human diets and are crucial to human survival Three species wheat rice and maize account for the bulk of human food Barley is the major raw material for beer production and ranks fourth in world production Other species such as sorghum are regionally important This book covers all the major cereal species wheat rice maize barley sorghum millet oats rye and triticale Specific chapters have been devoted to a description of the major end uses of

each of the species and to definition of the qualities required for each of their end uses The functional and nutritional quality of cereals determines their suitability for specific purposes and may limit the quality of the end product influencing greatly the commercial value of grain An understanding of the factors that determine grain quality is thus important in the maintenance of efficient and sustainable agricultural and food production The biochemical constituents of the grain that determine quality have been described in chapters on proteins carbohydrates and other components An understanding of the relationships between grain composition and quality is important in selecting grain for specific uses Barley for Food and Health Rosemary K. Newman, C. Walter Newman, 2008-09-11 With coverage of chemistry genetics and molecular breeding this book provides comprehensive and current information on barley types composition characteristics processing techniques and products Its emphasis on the nutritional and health benefits of barley is especially timely with the FDA's 2005 confirmation of barley's cholesterol lowering properties This resource discusses barley's role in breads and related products and reviews its health benefits biotechnology and breeding applications This is the definitive resource for cereal chemists food scientists nutritionists grain and food processors and students in appropriate courses **Wheat Structure** J D Schofield, 1996-01-01 Understanding the structural compositional and physicochemical properties of the wheat used in bread biscuits pasta and other consumer products is important This book brings together international experts to provide an overview of the progress made to date and also to give an insight into the new approaches that can be used to solve outstanding problems It covers progress in areas including what grain structure structural features of the gluten proteins structural functionality relationships of wheat protein lipid binding proteins rheology of dough systems and the importance of non starch polysaccharides
