Eyetsemitan, 2022-04-22 Conventional grief models focus on the bereaved including actions that they need to take to get back to normalcy following the death of a loved one This book suggests that it might be helpful in the grieving process to focus on the deceased instead Research points to the benefits of altruistic acts and thoughts including improvements in mood Altruistic acts and thoughts also could be extended to the deceased who in death has experienced a loss as well By taking on the perspective of and being empathic toward the deceased a response shift occurs that could result in mood improvement and happiness in the bereaved The book provides guidelines for this alternative grief model in the death of a child of a teenager of a spouse partner and of a sibling and in multiple deaths and in persistent grief experience among others Based on motivational principles a workbook is also provided for monitoring progress in coping with bereavement Comprehension questions and additional readings are provided in each chapter to help the reader further explore the topic at hand This book would be useful in a course on death dying and bereavement to healthcare practitioners bereavement counsellors and to scholars in death dying and bereavement across different fields including psychology sociology social work public health and religion Most grief models focus on the bereaved including actions the survivor needs to take to get back to normalcy after a loss However in the grieving process it might be helpful if attention is shifted to the deceased instead The bereaved by doing things she or he perceives as pleasing to the deceased might receive healing and satisfaction in return Lisa Farino 2010 notes that there is no shortage of research pointing to the beneficial effects of focusing on others In a study by Carolyn Schwartz and Rabbi Meir Sender 1999 lay people with a chronic disease were trained to provide compassionate unconditional regard to others who had the same illness The results showed that the providers of care and compassion reported better quality of life than the recipients of care and compassion even though both givers and receivers had the same disease The givers showed profound improvements in confidence self awareness self esteem depression and in role functioning The researchers emphasized the beneficial importance of response shift the shifting of internal standards values and concept definition of health and well being in dealing with one's own adversity Farino 2010 notes that this research is profound because in western culture the belief is that feeling happy tends to be getting something for yourself There are biological origins to the notion that it's better to give than to receive Using the functional magnetic resonance imaging fMRI researchers were able to demonstrate a connection between brain activity and giving People who gave voluntarily and also for a good cause experienced more activation of the part of brain that controls for pleasure and happiness e.g. Harbaugh Mayr Burghart 2007 Studies show that about 7% of the US population experience complicated or prolonged grief disorder e.g. Kersting et al 2011 This is persistent grief that does not go away and many parents tend to experience this after the loss of a child In their study Catherine Rogers and colleagues 2008 found bereaved parents reporting more depressive symptoms poorer well being and more health problems after a child's loss almost 20 years

later Survivors usually show concern about how their deceased loved ones felt prior to death and if happy or not in the afterlife e g Eyetsemitan Eggleston 2002 A study reported respondents used emotion discrete terms such as sad happy or angry to describe the faces of deceased persons The researchers suggested that the perceived emotional state of a deceased loved one could impact on the survivor s mourning trajectory e g Eyetsemitan Eggleston 2002 The bereavement model of placing focus on the deceased instead provides an alternative to existing bereavement models in helping the survivor to cope with a loss

MacKinnon, M.D.,Robert Michels, M.D.,Peter J. Buckley, M.D.,2015-10-20 Much has changed in the critical interval since the last edition of *The Psychiatric Interview in Clinical Practice* was published This new third edition provides an up to date examination of the psychiatric interview that reflects changes introduced in DSM 5 while continuing to recognize that describing symptoms and establishing a diagnosis should command only a portion of the clinician s attention and that a patient s personal history must be elicited and character structure addressed in the clinical engagement Significant advances have been made in biological psychiatry and research in genetics cognitive neuroscience psychopharmacology brain imaging and the neurosciences in general continues apace informing the culture of psychiatry and providing growing insight into the etiology of mental illnesses However the book reflects the authors belief that virtually all major psychiatric disorders are complex amalgams of genetic disposition and environmental influences In this context the psychiatric interview is a vitally

important dialogue and effective strategies are modeled through the use of clinical vignettes taken from the authors experience Topics and features of this new edition include An updating of diagnostic considerations to reflect the publication of DSM 5 A chapter on interviewing the patient with dissociative identity disorder DID which is now recognized as an entity distinct from other psychopathological conditions and rooted in childhood trauma The frequency of DID in the ambulatory setting has been repeatedly demonstrated and speaks to the need to accurately diagnose and treat this often debilitating disorder An entirely updated chapter on interviewing the traumatized patient A section on interviewing the patient of different background The book emphasizes that the subjective experience of being different is universal and that psychiatry is enriched by recognizing and exploring that experience validating its existence and attempting to understand how it influences the patient s life Continued emphasis on and inclusion of relevant case vignettes drawn from the authors clinical experiences Structural consistency across chapters with sections on psychopathology and psychodynamics differential diagnosis management of the interview transference and countertransference and so forth which reinforces skills acquisition and makes the text easy to use By creating a text that is aligned with DSM 5 while continuing to stress the importance of eliciting the patient s subjective experience and achieving a therapeutic dialogue the authors of *The Psychiatric Interview in Clinical Practice* have done a great service to the profession and provided much needed guidance to mental health clinicians and trainees
