Neuroendocrine Aspects Of Reproduction:

The Neuroendocrine Aspects of Reproduction Reid Norman, 2012-12-02 Neuroendocrine Aspects of Reproduction contains the proceedings of the Oregon Regional Primate Research Center's Second Symposium on Primate Reproductive Biology held in Beaverton Oregon on October 8-9 1982 The symposium provided a forum for discussing the neuroendocrinology of reproduction in primates and tackled topics ranging from delayed puberty as a factor in human evolution to gonadotropin releasing hormone neurons and pathways in the primate hypothalamus and forebrain Comprised of 18 chapters this book begins with an overview of some basic neuroendocrine mechanisms that influence reproductive processes followed by a discussion on control of the onset of puberty Control of ovulation in the rhesus macaque is considered along with hypothalamic regulation of gonadotropin secretion in women The next section deals with reproductive cyclicity in female primates and the extent to which the central nervous system participates in the control of such cyclicity Subsequent chapters explore the biological basis for the contraceptive effects of breastfeeding the effects of hyperprolactinemia on reproductive function in humans and neuroendocrine changes during menopausal flushes This monograph will be of interest to students practitioners and researchers in the fields of reproductive biology

neuroendocrinology and physiology Neuroendocrine Aspects of Reproduction Reid L. Norman, 1983 **Neuroendocrine Aspects of Reproduction** Reid L. Norman, 1983-01-01 The Neuroendocrine Aspects of Reproduction Hormonal Control of Reproduction Colin Russell Austin, Roger Valentine Short, 1984 In this our Second Edition of Reproduction in Mammals we are responding to numerous requests for a more up to date and rather more detailed treatment of the subject The First Edition was accorded an excellent reception but the first five books were written ten years ago and inevitably there have been advances on many fronts since then As before the manner of presentation is intended to make the subject matter interesting to read and readily comprehensible to undergraduates in the biological sciences and yet with sufficient depth to provide a valued source of information to graduates engaged in both teaching and research Our authors have been selected from among the best known in their respective fields This volume discusses the manifold ways in which hormones control the reproductive processes in male and female mammals The hypothalamus regulates both the anterior and posterior pituitary glands whilst the pineal can exert a modulating influence on the hypothalamus The pituitary gonadotrophins regulate the endocrine and gametogenic activities of the gonads and there are important local feedback effects of hormones within the gonads themselves Non pregnant females display many different types of oestrous or menstrual cycles and there are likewise great species differences in the endocrinology of pregnancy But the hallmark of mammals is lactation and this also exerts a major control on subsequent reproductive activity Knobil and Neill's Physiology of Reproduction , 2005-12-12 The 3rd edition the first new one in ten years includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization There are 5 new Associate Editors and about 2/3 of the chapters have

new authors Chapters prepared by return authors are extensively revised Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade The information covered includes both human and experimental animals basic principles are sought and information at the organismic and molecular levels are presented The leading comprehensive work on the physiology of reproduction Edited and authored by the world's leading scientists in the field Is a synthesis of the molecular cellular and organismic levels of organization Bibliographies of chapters are extensive and cover all the relevant literature

The Reproductive Neuroendocrinology of Aging and Drug Abuse

Charles D. Barnes, Dipak K. Sarkar, 1994-11-22 The communication between the hypothalamus pituitary and gonad is bi directional and alterations of the communication in the circuitry as often occurs during aging and drug abuse results in acyclicity hypogonadism and impotence This important reference covers topics on the neuroendocrine control mechanisms governing the reproductive process in both males and females It discusses the importance of the differentiation of the neuroendocrine brain during the developmental period for the normal reproductive process It also summarizes the effects of prenatal drug abuse on the differentiation of the neuroendocrine brain development and how this alteration induces abnormalities in the reproduction process This comprehensive volume compares the effects of various psychoactive drugs on the maintenance of reproduction and describes the changes in the reproductive neuroendocrine axis during aging

Knobil

and Neill's Physiology of Reproduction Ernst Knobil, Jimmy D. Neill, 2006 The 3rd edition the first new one in ten years includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization There are 5 new Associate Editors and about 2/3 of the chapters have new authors Chapters prepared by return authors are extensively revised Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade The information covered includes both human and experimental animals basic principles are sought and information at the organismic and molecular levels are presented The leading comprehensive work on the physiology of reproduction Edited and authored by the world's leading scientists in the field Is a synthesis of the molecular cellular and organismic levels of organization Bibliographies of chapters are extensive and cover all the relevant literature

Mammalian Reproductive Biology F. H. Bronson, 1989 A unique interdisciplinary

overview of the way mammals reproduce this volume synthesizes research done by laboratory physiologists behaviorists population ecologists and animal breeders F H Bronson has drawn together the disparate literature in these areas to provide students and researchers with a comprehensive and biologically integrated approach to the study of mammalian reproduction Each chapter presents a wealth of issues and questions summarizing the current consensus on interpretations as well as viable alternatives under debate The book is principally concerned with how environmental factors regulate reproduction Bronson proposes that a mammal's reproductive performance routinely reflects simultaneous regulation by several environmental factors that interact in fascinatingly complex ways Environment is defined broadly and the chapters

give equal weight to ecological and physiological factors when considering how variables such as food availability ambient temperature photoperiod and social cues interact to regulate a mammal's reproduction. Particular attention is given to seasonal breeding and a taxonomically arranged chapter underscores the importance of comparative and evolutionary biology to an understanding of mammalian reproduction. **Mammalian Reproductive Biology** is a powerful argument for the value and importance of interdisciplinary approaches to research. Its almost 1 500 references constitute the most comprehensive bibliography to date on this topic. Bronson also gives detailed consideration to promising areas for future research. Well organized carefully planned and clearly written this book will become standard reading for scientists concerned with any aspect of mammalian biology. **Knobil and Neill's Physiology of Reproduction** Tony M.

Plant, Anthony J. Zeleznik, 2014-11-15 The Fourth Edition of Knobil Neill continues to serve as a reference aid for research to provide the historical context to current research and most importantly as an aid for graduate teaching on a broad range of topics in human and comparative reproduction. In the decade since the publication of the last edition the study of reproductive physiology has undergone monumental changes. Chief among these advances are in the areas of stem cell development signaling pathways the role of inflammation in the regulatory processes in the various tissues and the integration of new animal models which have led to a greater understanding of human disease. The new edition synthesizes all of this new information at the molecular cellular and organismal levels of organization and presents modern physiology in a more understandable and comparative context. The Fourth Edition has been extensively revised reflecting new fundamental advancements in this rapidly advancing field. Provides a common language for researchers across the fields of physiology endocrinology and biology to discuss their understanding of reproduction. Saves academic researchers time in quickly accessing the very latest details on reproductive physiology as opposed to searching through thousands of journal articles.

Neuroendocrine Aspects of Reproduction in Female Protein-deficient Rats William H. Fletcher, 1972

Handbook of Neuroendocrinology George Fink, Donald W. Pfaff, Jon Levine, 2011-08-31 Neuroendocrinology the discipline concerned with how the nervous system controls hormonal secretion and how hormones control the brain is pivotal to physiology and medicine. Neuroendocrinology has disclosed and underpins fundamental physiological molecular biological and genetic principles such as the regulation of gene transcription and translation the mechanisms of chemical neurotransmission and intracellular and systemic feedback control systems. Reproduction growth stress aggression metabolism birth feeding and drinking and blood pressure are some of the bodily functions that are triggered and/or controlled by neuroendocrine systems. In turn neuroendocrine dysfunction due to genetic or other deficits can lead for example to infertility impotence precocious or delayed puberty defective or excessive growth obesity and anorexia Cushing's Syndrome hypertension or thyroid disorders. These as well as neuroendocrine tumors are some of the themes covered in the 36 chapters of the Handbook. Drafted by internationally acknowledged experts in the field the Handbook chapters feature

detailed up to date bibliographies as well as how do we know call out sections that highlight the experimental or technical foundations for major concepts principles or methodological advances in each area Aimed at senior undergraduate and graduate students post doctoral fellows and faculty in neuroscience medicine endocrinology psychiatry psychology and cognate disciplines the Handbook of Neuroendocrinology satisfies an unmet need that will prove useful at the laboratory bench as well as in the office The most comprehensive up to date source covering basic principles neural regulation hormone brain function and behavior and neuroendocrine pathology How do we know callout sections highlight core concepts Heavily illustrated with over 350 figures 4 color throughout *Neuroendocrinology* David A. Lovejoy, 2005-11-01 There has been an explosion of interest in the field of neuroendocrinology over the last twenty years with the discovery of neurohormones regulating virtually everything from growth and development to sexual and aggressive behavior This book provides a much needed introduction to neuroendocrinology from a zoological and evolutionary perspective It covers the evolution development and description of the neuroendocrine system throughout the animal kingdom Specific topics covered include The Evolution of early neuroendocrine systems in primitive animals Structural characterisation molecular biology and biochemistry of neuroendocrine agents A profiles section on unusual aspects of neuroendocrine physiology written by leaders in the field A unique section on the actions of environmental chemicals effect neuroendocrine systems in various species

Vertebrate Reproduction Volker Blüm, 2012-12-06 Oral birth in the Australian gastric brooding frog *Rheobatrachus* sUus 2 Preface I have deliberately chosen the title picture to the preface which shows the oral birth of a young gastric brooding frog *Rheobatrachus situs* to draw the reader s attention to the preface since I wish to explain why the book was written and illustrated in the way it now appears The book has grown out of the material of a lecture course taking 3 to 4 hours per week each semester that I have given for several years at the Ruhr University Bochum as the theoretical basis for an intensive 4 week practical course on vertebrate reproduction for students of biology For various reasons I am a hardened opponent of giving lecture notes to the students On the other hand I found that my students made great efforts to work through and supplement their own lecture notes by studying the literature However there are no suitable textbooks on vertebrate reproduction written in German and the standard work in this field is now several decades old and deals mainly with mammals The students were therefore often frustrated in their efforts given the limited time they had available I have therefore decided to present here the most important structural and functional aspects of vertebrate reproduction and include other material to extend the framework of my original lectures **Asdell's Patterns of Mammalian Reproduction** Virginia Douglass Hayssen, Ari Van Tienhoven, Ans Van Tienhoven, 1993 Since the appearance of the second edition of Sydney A Asdell s widely used *Patterns of Mammalian Reproduction* in 1964 the field of reproductive physiology has expanded dramatically Accordingly this revision adopts a different structure from previous editions substituting empirical delineations for physiological interpretations With the emphases now on a presentation of the published facts of mammalian reproduction

it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species To gather information the authors examined more than 20 000 publications dating up to 1992 They used primary sources as much as possible supplementing them with English translations of Russian Finnish Chinese and Japanese journals The data are presented in taxonomic order Each familial account summarizes the pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology reproductive anatomy and reproductive physiology of the family Following each account is a tabular listing of species specific data for neonatal mass and size weaning mass and size litter size age at sexual maturity estrous cycle length gestation length lactation length number of litters per year and seasonality of reproduction For each of these reproductive variables the range of data gleaned from the literature is given together with the source of each value listed Virginia Hayssen is Assistant Professor of Biology at Smith College Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University Ans Van Tienhoven assisted in the compilation of data for the book Population Sciences ,1979 The index is based on citations selected from the corresponding monthly issue of Index medicus

Kisspeptin Signaling in Reproductive Biology Alexander S. Kauffman,Jeremy T. Smith,2013-04-02 Kisspeptin has been shown to be both necessary and sufficient for activation of the reproductive axis during puberty and later in adulthood This makes kisspeptin a fundamental component of the reproductive axis Kisspeptin has been deemed the single most potent stimulator of GnRH neurons yet known The importance of kisspeptin has been documented in humans as well as non human animal models ranging from monkeys sheep and rodents to numerous fish species thus signifying a highly conserved nature of its reproductive function Importantly kisspeptin neurons seem to mediate many of the regulatory effects of other signals whether they are metabolic circadian hormonal or stress This places kisspeptin neurons in a unique position to be key nodal points and conduits for conveying numerous endogenous and exogenous signals to the reproductive axis
